Published December 1993, revised February 1999. Texas State Fire Marshal's Office, G. Mike Davis, State Fire Marshal. PO Box 149221, Austin, TX 78714-9221, 512-305-7900. The State Fire Marshal's Office and the Texas Department of Insurance do not discriminate on the basis of race, color, national origin, sex, religion, age or disability in employment or activities. For additional fire prevention information, contact the State Fire Marshal's Office. This publication may be reproduced in its entirety. Such reproduction must include credit to the original producer, specifically the State Fire Marshal's Office. Copies of this publication have been distributed in compliance with the State Depository Law and are available for public use through the Texas State Publications Depository Program at the Texas State Library and other state depository libraries.

# **Introduction**

# Introduction

## Why teach fire and burn prevention?

Each year during the past decade, about 300 Texans have died in fires. The State Fire Marshal's Office is committed to reducing this alarming statistic. Analysis of fire statistics shows that the vast majority of fires — and the resulting fire deaths — could have been prevented. Regretfully, most people do not know or practice even simple actions that can prevent fires and burns.

The State Fire Marshal's Office believes the key to reducing fires and fire deaths is education. Fire safety education has traditionally been concentrated in elementary school observances of Fire Prevention Week. While these observances can produce effective results, thoughtful analysis of the fire problem and fire safety educational programs shows that a more comprehensive, age-appropriate approach to fire safety education can multiply its benefits.

Recognizing the limits of classroom instruction time, the State Fire Marshal's Office has examined the Texas essential elements of instruction to determine the most appropriate topics with which to integrate fire prevention and fire safety. Teachers from across the state have provided feedback on topics appropriate for each grade level, kindergarten through high school.

The result of this extensive research is "Fire Safety for Texans," a series of curriculum guides teaching fire and burn prevention. Each grade-level program has been coordinated with essential elements in that grade and with the unique specific fire safety needs of that age group. The lesson plans have been field tested in classrooms across the state. On average, students who have been taught using these materials score 26 percent higher than students in control groups.

As you use this guide, you and teachers in other grade levels will be part of a continuum of fire safety education spanning all grades. The State Fire Marshal's Office believes this continuum will help create a generation of Texans who will be fire-safety aware. In turn, all Texans can benefit from a decrease in the number of needless fire deaths and an increase in safer homes and worksites — a benefit we all deserve.

## This Booklet

This booklet, "Fire Safety's My Job," is specifically designed for eighth-graders. The following sections give specific information on the essential elements applicable to fire and burn prevention and on the age-specific needs of eighth-grade students related to fires and burns. You

will also find additional information on the format and materials found in this booklet.

This booklet has three sections:

- **Lesson Plans.** This section includes all steps in the lesson cycle.
- **Teacher Materials.** This section includes all teaching aids and tests.
- **Student Materials – Duplicating Masters.** This section includes master copies of materials to be used by students.

**General Objectives:** To focus on technical aspects of fire hazards and detection

To explore fire hazards outside the home

**Essential Elements:** The student will be provided opportunities to:

§75.44 (b) 3. classify objects or events according to similarities and differences.

§75.44 (b) 7D. contrast human activities that affect the natural environment.

§75.48 (c) 3D. analyze the impact of technological innovations on business, industry and agriculture (in U.S.).

## Background: Age Profile

Stage of identity vs. role confusion, which means the young teen needs experiences that will help establish his own identity. Lack of successful experiences may lead to confusion about his future role as an adult.

The young teen experiences variability in emotions, physical abilities and scholastic interests. She is probably more concerned about appearance and sex roles than occupational choice, but will begin thinking about careers and the future.

While the eighth grader desires to be independent, acceptance by peers is very important. He may be easily influenced by peer pressure and have a tendency to hero worship. The young teen may take risks and exhibit a tendency to test authority. She "tries on" different attitudes and actions.

He is beginning formal operational thought, which means he is learning to solve problems without models. He wants to try mental manipulations. Thinking can be flexible, abstract and local. The junior high student can apply his new thinking skills to many situations. Successful learning can take place through experiences, hypothetical projections, role models, demonstrations, rehearsal and teaching others.

The young teen operates under a morality of cooperation. She views rules as flexible, to be obeyed out of respect.

### Fire And Burn Hazards

Cigarette smoking, especially combined with drugs and alcohol.

Cooking — contact with stoves or other appliances; hot liquids or grease while serving or cooking food, including job-related.

Flammable substances — gasoline, including use in car, storage in garage, use to start fire; explosive chemicals.

Burns from mechanical equipment — burns from exhaust, radiator, battery or welding on cars or motorcycles; gasoline; mini-bikes and lawn mowers.

Clothing ignition from careless smoking or cooking. Smoke and gas inhalation from fire.

Outdoor hazards — utility poles and high-tension wires; sunburn; fireworks.

**Teacher's Notes On Materials:** Illustrations and activity sheets in this booklet are intended to serve as masters. Photocopy, then use the photocopy as directed.

The eighth-grade unit uses background information and activity sheets in the form of a student "Tech Manual." The teacher may produce the booklet (insert all pages in a folder or staple pages together), or the pages may be distributed to the students during each lesson to insert in a folder. The lesson plans assume that the material has already been compiled into booklets.

Pages to include in the student "Tech Manual" are:

- "Fire Safety Technical Manual" Title Page
- "Factors In Ability To Burn"
- "How Would It Burn?"
- "Hazards In The Workplace"
- "Selected Safety Guidelines"
- "Be On Guard"
- "My Own Business"
- "Smoke Alarms On Guard"
- "Home Smoke Alarm Survey"
- "Outdoor Fires"
- "Outdoor Fire Safety"
- "Wanted: Fire Safety Helper"

**Pre-Test and Post-Test:** Conduct the pre-test prior to presenting the first lesson and the post-test following the fifth lesson.

**Teacher's Note on Closure Activities:** Some activities included in the closure phase of the lesson cycle may be effectively used in the next lesson's focus activity.

**Key To Icons:** The following icons can be used to easily identify activities in the lesson plans:

Lesson objectives

Focus and closure

Creative group activity, including role playing

Lecture

Group problem-solving activity

Answering questions

Guest presenter

Investigation or research

Creative writing activity

Cut-and-paste activity

Group discussion

Drawing, artwork or illustration

# **Lesson Plans**

## LESSON ONE:

# Applying Fire Science

**Goal:** *To relate characteristics of fire and flammable/combustible materials*

**Objectives:** The student will:

- define and describe fire, flash point, flammability of construction and clothing types \*44(b)7D

**Materials:** Pre-tests (p. 15); "Fire Safety Learning Laboratory" sign (p. 16); pages titled "Fire Safety Technical Manual"(p. 29), "Factors in Ability To Burn" (p. 30) and "How Would It Burn" (p. 31) from student "Tech Manual"; "Factors In Ability To Burn" overhead transparency (p. 17); answer keys (pp. 24-26).

**Focus:** Administer pre-test before beginning lesson.

Display "Fire Safety Learning Laboratory" sign. Introduce unit on fire prevention by reviewing basic information (three elements of fire, rolling to put out clothes fire, crawling in smoke, cooling a burn, checking for fire hazards). Tell students that:

- This study will focus on the workplace and on technical aspects of fire safety.
- The classroom will be a mock factory called the "Fire Safety Learning Laboratory."
- The students will be "Fire Safety Technicians." Define "technician" as a person who has a specialized job that requires specific knowledge and skill.

List unit objectives:

- To focus on technical aspects of fire hazards and detection
- To explore fire hazards outside the home

Outline lesson objectives (paragraph above).

**Presentation Of Content:** Distribute "Fire Safety Tech Manuals." Discuss purpose of a technical manual, presented on the title page. Encourage student involvement in the mock lab situation.

**Participatory lecture:** Remind students that before beginning their job, they will need some background information. Have selected students read aloud the definitions and descriptions of fire, flammable flash

point, and flash fire. Have students give at least one example of the use of each term. Briefly examine the flash point chart. (The chart is provided as supplementary information.)

Display "Factors In Ability To Burn" on overhead projector. Examine and discuss explanation of "Factors In Ability To Burn." Have students classify items in the room as more or less easily burned.

**Guided Practice:** Direct student attention to classification activity on "Factors In Ability To Burn." Read the list of items and guide students in writing the name of the items in appropriate boxes.

**Independent Practice:** Direct student attention to "How Would It Burn?" activity. Instruct students to read the stories and answer the questions.

**Reteaching:** Invite a fire fighter or fire investigator to talk to class about burn characteristics of different types of structures.

**Enrichment:** Have students conduct a complete inventory of a room, listing all items. Have them classify each item in a chart similar to the chart used in the guided practice activity. Ask students to share their evaluation of the relative risk of fire in that room (does it contain more objects that are easily burned?) and how the risk of fire might be reduced.

**Closure:** Review selected responses to the story-question activity. Review the definition of flash point and flammable. Congratulate students on their "first day on the job" as "fire safety technicians."

Introduce the next lesson by telling students that they will examine fire hazards commonly found in workplaces and an increasingly popular way of reducing fire in the workplace.

## LESSON TWO:

# At The Workplace / Sprinklers

**Goal:** To review fire hazards in the workplace and to study the concept and use of fire suppression sprinklers

**Objectives:** The student will:

- list at least 10 typical hazards in the workplace, including industrial, retail and office \*44(b)3
- describe basic function of sprinklers, including residential fast response sprinklers \*48(c)3D

**Materials:** "Hazards In the Workplace" (p. 32-35), "Be On Guard" (p. 36) and "My Own Business" (p. 37) from student "Tech Manual"; "Fire Suppression Sprinkler" illustration (p. 18); answer keys (pp. 24-26).

**Focus:** Remind students that despite awareness of fire hazards, the United States public has not shown great success in preventing fire; the exception is in the workplace, where laws and concern for profits have created much attention on the safety of property and people.

Tell students that their job at the Fire Safety Learning Laboratory today will be to examine workplace safety. Outline lesson objectives (paragraph above).

**Presentation Of Content:** Direct student attention to "Hazards In The Workplace" page in their "Tech Manuals." Read and discuss the first section. Have students name some types of equipment found in different types of work sites and businesses.

Read section "Sprinklers." Discuss the following questions:

- What is the purpose of automatic fire suppression sprinklers? (To put out or control the fire until fire fighters can arrive.)
- Why would a business owner or a building owner install sprinklers? (To protect the building or the supplies or equipment in the building. To save money.)
- In the past, most sprinklers were installed to keep property from being lost in a fire. Now, more sprinklers are being installed to protect people from fire. How do you feel about this? (Allow students to share their opinions.)

- Television and movie producers commonly show sprinkler systems going off, with every sprinkler in the room spraying water. Is this accurate? (No.)
- Where have you seen sprinklers in buildings? (Accept student responses. Most common sites that students may have seen: mall, hotels, stores, warehouses.)

**Guided Practice:** Group problem solving activity:

Divide students into six groups. Assign each group one of the remaining sections. Have the students read their respective sections and prepare lists of five items or actions that might create fire hazards in that type of business. Allow five to 10 minutes. Instruct students to write their lists on the appropriate section of "Be On Guard" pages of their Tech Manuals.

Have groups report their lists. Write on poster or overhead projector, while students complete the remaining sections of "Be On Guard."

**Independent Practice:** *Creative analysis:* Direct student attention to "My Own Business" pages of their Tech Manuals. Have students pretend to set up their personal division of the Fire Safety Learning Laboratory based on their own interests. Working on their own, have students prepare a list of possible fire hazards and write a statement on the use or value of sprinklers.

**Reteaching:** Have students talk with parents, vocational teachers or other adults about safety in the workplace. Ask students to prepare list of 10 workplace fire hazards based on the discussion.

Review the operation of sprinklers, specifically that sprinklers are activated individually by high heat directly below the sprinkler head. Discuss how real operation of a sprinkler is different from their portrayal on television shows.

**Enrichment:** Have students interview parents or other adults on fire hazards or fire safety guidelines in their workplaces and prepare a report on the value of fire safety programs on the job.

Have students investigate the use of sprinklers in local buildings.

**Closure:** Review the purpose of sprinklers in controlling fires. Ask students if having sprinklers removes their responsibility for being careful with fire hazards. (No.) Have some students share information

on the "businesses" they created in the independent practice activity.

Introduce the next lesson by telling students that their next job as Fire Safety Technicians will involve a technical wonder that is much more common than sprinklers and has saved many lives.

---

### LESSON THREE:

# Smoke Alarms

**Goal:** *To explore the functions and applications of smoke alarms*

**Objectives:** The student will:

- describe basic function of two types of smoke detectors \*48(c)3D
- survey and maintain smoke alarms at home \*48(c)3D

**Materials:** "Smoke Alarms At Work/How Smoke Alarms Work" (p. 38-39), "Smoke Alarms On Guard" (p. 40) and "Home Smoke Alarm Survey" (p. 41) from student Tech Manual; "Smoke Alarms At Work/How Smoke Alarms Work" illustration (pp. 19-20); answer keys (pp. 24-26).

**Focus:** Tell students today their jobs as Fire Safety Technicians will take them to their own homes.

Display "Smoke Alarms At Work" chart showing smoke alarm performance in fires. Tell students that fire safety experts say that having a working smoke alarm triples the chances of surviving a fire and that smoke alarms are technical innovations that have saved hundreds of lives and can save more. Outline lesson objectives (paragraph above).

**Presentation Of Content:** Direct student

attention to "Smoke Alarms On Guard" pages in their Tech Manuals. Display "How Smoke Alarms Work" illustration. As students examine illustrations and explanations, lead a discussion on the similarities and differences of the two types of detection methods.

Direct student attention to "Helping Smoke Alarms Do Their Job." Review and discuss basic guidelines for smoke alarm placement and maintenance. Have students describe important times for checking smoke alarms. (When the alarm emits a low-battery warning, when moving into a new house, when the alarm seems to go off needlessly when there is no smoke.)

**Guided Practice:** Direct student attention to "Alike Or Different." Have students read the instructions and circle the appropriate answers.

**Independent Practice:** Direct student attention to "Home Smoke Alarm Survey" pages in their student Tech Manuals. Have students take the pages to their homes to complete the activity.

**Reteaching:** Direct students in writing statements on the importance of installing and properly maintaining smoke alarms.

**Enrichment:** Have students locate smoke detectors/alarms in school or other public building and describe the locations.

Have students research local ordinances on smoke alarms in residences, hotels and/or rental property.

**Closure:** Have student volunteers share the results of their home surveys. Remind students that the technology of smoke alarms has improved significantly in recent years and that the trend will probably continue. Remind them of their future role as family leaders and providers in maintaining smoke alarms in their homes.

Introduce the next lesson by telling students that their next assignment for the Fire Safety Learning Laboratory will help them become involved in the environment.

## LESSON FOUR:

# Outdoor Fire Safety

**Goal:** To review and explore issues of outdoor fire safety, including fireworks

**Objectives:** The student will:

- list comprehensive rules for outdoor safety \*44(b)7D
- investigate community laws on fireworks \*44(b)7D

**Materials:** "Outdoor Fires" (p. 42) and "Outdoor Fire Safety" (p. 43) pages from student Tech Manual; "Outdoor Fires" graphs (p. 21); answer keys (pp. 24-26).

**Focus:** Review information from Lesson One on characteristics of forests and wildlands (more combustible in dry weather, high quantity of fuel for fire). Point out that while forests and wildlands are renewable resources, regrowth is long term. Emphasize students' role in preserving outdoors.

Tell students that for this lesson, the Fire Safety Learning Laboratory will move outdoors. Outline lesson objectives (paragraph above).

**Presentation Of Content:** Display "Outdoor Fires" graph on over head projector or poster. Point out graph titled "Types of Fires" and have students recognize outdoor fires as the largest numbers. Direct student attention to "Types of Outdoor Fires" on overhead or poster and have students recognize "Trees, brush and grass" as the largest number of outdoor fires and "Refuse (trash)" as the second largest.

**Participatory lecture / discussion:** Direct student attention to "Outdoor Fires" in student Tech Manual. Point out "Causes of Brush and Grass Fires" on the overhead transparency or poster, and direct student attention to those graphs in their books.

Lead discussion of the types of materials that are involved and the causes of outdoor fires as students answer questions on the page. Emphasize the conclusion that outdoor fires rarely occur naturally; that virtually all outdoor fires are caused by people, either on purpose or through negligence.

**Guided Practice:** *Small-group study:* Divide students into small work groups of two to four people. Direct student attention to "Outdoor Fire Safety" pages from student Tech Manual. Have students read the outline, then write rules or guidelines related to preventing outdoor fires for all items.

**Note:** The sections may be assigned by group, with results copied or posted for the entire class.

**Independent Practice:** *Investigation and /or opinion paper:* In preparing to write opinion papers described in the following paragraph, students may be assigned to investigate laws or rules regulating fireworks or outdoor burning in their community. If the investigation is not assigned, students may base their papers on general information provided in "Outdoor Fire Safety" (above).

Have students prepare opinion papers on the value of restrictions on fireworks and/or outdoor burning. Papers should include at least three outdoor fire safety rules that they can use or apply in their own experiences. Papers should integrate information on general hazards of outdoor fires, with recognition of fireworks and/or outdoor burning as an unnecessary source of heat.

**Reteaching:** Have students research the short-term and long-term effects of a wildlands fire. Their research might include loss of homes for animals, loss of crops, effect on soil erosion, cost of replacing trees or crops, or damage to nearby buildings.

**Enrichment:** Submit student papers to student newspaper or community newspaper for consideration for publication.

Have students research news stories on dry weather "outdoor burning bans" enacted by many county governments in recent years.

**Closure:** Review rules prepared by students in Guided Practice activity. Have student volunteers share their opinion papers. Restate general concern for preserving the environment by preventing outdoor fires.

Introduce next lesson by telling students that their final day acting as Fire Safety Technicians will be a look at how they might actually apply what they've learned about fire safety.

## LESSON FIVE:

# Accepting My Safety Job

**Goal:** *To review and reinforce personal responsibilities for fire safety*

**Objectives:** The student will:

- describe desire to be safe and to keep others safe \*44(b)7D

**Materials:** "Help Wanted" illustration (p. 22); "Wanted: Fire Safety Helper" pages (p. 44) from student Tech Manuals; post-tests (p. 23); answer keys (p. 24-26).

**Focus:** Display "Help Wanted" illustration. Tell students that thanks to their work as "fire safety technicians" during this study, they now have many skills that would qualify them for this kind of job. Outline lesson objectives (paragraph above).

**Presentation Of Content:** *Brainstorming*

*discussion:* Lead students in a brainstorming, review discussion on the meaning of:

- Fire — include review of fire history, components of fire, types of materials that are flammable, factors in flammability.
- Safety — include safety rules for various types of workplaces, safety rules for the outdoors, use of smoke alarms and sprinklers.
- Responsibility — include the student's ability to control and influence his/her environment, the changes in responsibilities as the student grows and matures, the role that the student can have in his family and community.

**Guided Practice:** Direct student attention to "Wanted: Fire Safety Helper" pages in student Tech Manuals. Instruct the students to prepare a description of a fire safety job of their choosing. Guide students in selecting a type of job (job title). Note suggestions on page. NOTE: Some student may prefer to select a general title, such as fire safety worker.

Continue guiding students in listing things that are needed to do the selected job. Help students relate what they have learned during the unit.

**Independent Practice:** Direct student attention to the second activity on their "Help Wanted" pages. Have the students write short letters saying why they are qualified for the jobs. Remind them to list at least five specific fire safety facts they know or skills that they have. Remind them to include one sentence expressing their personal desires to help others be fire safe.

**Reteaching:** Guide students in discussion of the interdependency of community and family members. Include a discussion of the consequences of a lack of safety awareness.

**Enrichment:** Invite a fire service professional to talk about his/her role in community safety.

Have students who are members of service groups (Boy Scouts, Girl Scouts, 4H, etc.) report on safety projects with which their organization has been involved.

**Closure:** Review the original "Help Wanted" illustration and compare it to the job descriptions and letters prepared by the students. Discuss real opportunities for becoming involved in community safety projects.

Congratulate students on completing their work as "fire safety technicians" for the "Fire Safety Learning Laboratory." Have students share their opinions on this method of doing a special study.

**Administer post-test.**

# **Teacher Supplemental Materials**

# Fire Safety Learning Laboratory

**Our Motto:**  
**"Fire safety's MY job!"**

Teacher: Use with all lessons. Transfer to poster or flyer, and display in classroom.

# Factors in Ability To Burn

Background Information / Classification Activity

Many factors affect whether something will burn easily or whether it will be more difficult to burn. Two major factors are:

## 1. What item is made of

➤ Examples of resources that burn easily :

plants, trees and grasses, wood and other plant products, such as cotton, paper, many fabrics, vegetable

cooking oil, alcohol, petroleum-based products, such as gasoline, oil, many other flammable liquids, nylon and polyester

➤ Examples of resources that do not burn easily:

metals and rocks                      concrete, bricks and similar products

fabrics or wood that has been treated with a flame retardant chemical      Note: Leather and wool generally do not burn as easily as fabrics.

## 2. Whether oxygen is available

➤ The availability of oxygen is affected by how the item is made.

*Example:* A tightly-worn cotton shirt allows less oxygen than a loosely-woven cotton shirt. Close-fitting clothes allow less oxygen than loose-fitting clothes.

➤ The availability of oxygen can be controlled by where the item is located.

*Example:* Oily rags, which might self-ignite, should be stored in a closed metal container. If a fire should start, the fire will quickly use up the oxygen and die.

### Classification Activity

Look at the following list of items. Classify each according to whether it would burn more easily or less easily. Then write each in the appropriate section of the table below.

<p><b>Natural Resource</b></p> <p>forests grasslands petroleum rocks and barren soil</p> <p><b>Buildings</b></p> <p>wood-frame house building built of steel and concrete</p> <p><b>Clothes</b></p> <p>loose, flowing lace gown close-fitting, tightly-woven cotton shirt flame-retardant pajamas</p>
---

Burns more easily	Burns less easily

## Bonus

On a separate sheet of paper, make a complete list of all items in this room or a room at home. Then make a copy of the table above and classify each item on your list.

After you complete your classification table, write a statement telling whether you think a fire might be likely to start in the room.

Teacher: Use with Lesson One, Page 7. Transfer to overhead transparency

# Fire Suppression Sprinkler

Background Information / Illustration

Teacher: Use with Lesson Two, Page 8. Transfer to poster or overhead transparency.

# Smoke Alarms At Work / How Smoke Alarms Work

Background Information

## Smoke Alarms At Work

**Smoke Alarms In Fatal Fires in 1999**

**Residential Smoke Alarm Performance in 1999**

Source: Texas Fire Incident Reporting System

(14,902 residential fires, 60 fatal residential fires in 1999.)

Teacher: Use with Lesson Three, Page 9. Transfer to poster or overhead transparency.

# How Smoke Alarms Work

Teacher: Use with Lesson Three, Page 9. Transfer to poster or overhead transparency.

Both types of smoke alarms need electricity to operate. They may use batteries or may be directly connected to the building's electrical wiring (called "hard-wired").

## Ionization Smoke Alarm

When smoke enters the sensing chamber, smoke particles get in the way of the electrons, breaking the circuit. A sensor in the circuit tells the alarm to sound.

Responds faster to small smoke particles from a flaming fire

## Photoelectric Smoke Alarm

When smoke enters the sensing chamber, light reflects off smoke particles and hits the light sensor. The light sensor tells the alarm to sound.

Responds faster to larger smoke particles produced by smoldering fires

## Outdoor Fires Types of Fires, 1999

Total Fires in Texas, 1999: 78,949

## Outdoor Fires, 1999 Types of Outdoor Fires

Fires Reported: 39,770

## Ignition Causes of Brush and Grass Fires, 1997

Teacher: Use with Lesson Four, Page 10 Transfer to poster or overhead transparency.

## **Help Wanted**

**Take-charge person  
who knows about fire  
safety and prevention.**

**Job involves  
preventing fires and  
burns.**

Teacher: Use with Lesson Five, Page 11. Transfer to poster or overhead transparency

# ANSWER KEY-1

Name: \_\_\_\_\_

**Eighth Grade Fire Safety's My Job** FIRE-11700 POST-11700

1. In the blank below each number, write the name of the person that correctly describes the work.

1. Fire A. 1 of two of a person that will turn a fire into water  
 2. Flammable liquid B. A chemical process involving heat, light, sound, and sometimes color, odor, or pressure  
 3. Ruptured C. Unable to contain  
 4. Flammable D. A substance that will burn or have flammable liquids will burn up

Circle the item in each job that will have more safety:

1. Heavy machinery wooden house  
 2. John Deere tractor wooden house  
 3. Lawnmower wooden house  
 4. City sign on a road city sign on a road

Circle the letter of the best answer:

5. A fire suppression system is used to by:  
 a. extinguish the fire  
 b. prevent the fire from starting  
 c. help in the fire  
 d. help in the fire

6. Which of the following is not a type of fire?  
 a. building fire  
 b. outdoor fire  
 c. car and road fire

7. Which type of vehicle would have a small fire?  
 a. fire truck  
 b. fire truck  
 c. fire truck

8. Name three types of fire products and/or fire activities:  
Accept reasonable answers. (See Lesson 2.)  
Most common: person, industrial equipment,  
flammable liquids, electrical appliances.

9. What are the risks to children in safety?  
Accept reasonable answers. (See Lesson 4.)  
Most common: Don't throw old cigarettes, don't  
burn outdoors, avoid fireworks.

10. Circle True or False:  
 10. Every person should be responsible for the safety. True  
 11. The suppression system is used to help in the fire. True  
 12. Because there are many types of fire, it is hard to control. True  
 13. What have most children been exposed to?  
grass, trees, brush

14. What are the risks to children in safety?  
Accept reasonable answers. (See Lesson 4.)  
Most common: Don't throw old cigarettes, don't  
burn outdoors, avoid fireworks.

15. What are the risks to children in safety?  
Accept reasonable answers. (See Lesson 4.)  
Most common: Don't throw old cigarettes, don't  
burn outdoors, avoid fireworks.

Name: \_\_\_\_\_

**Factors in Ability To Burn**  
 Background Information - Classification Activity

Many items, even those containing oil, burn easily or whether it will be easy or difficult to burn. The table below are:

**1. What item is made of?**  
 Examples of materials that burn easily:  
 paper, fabric, grass, wood, oil, plastic, metal, etc.  
 Examples of materials that do not burn easily:  
 concrete, brick, stone, glass, etc.

**2. Whether oxygen is available?**  
 The probability of oxygen is available to burn is high. The probability of oxygen is available to burn is low. The probability of oxygen is available to burn is high. The probability of oxygen is available to burn is low.

**Bonus**  
 In a separate sheet of paper, make a comparison of all items and materials on a table. The table is for the building fire. (Handwritten notes: forests, grasslands, petroleum, wood-frame house, loose, flowing gown, etc.)

Name: \_\_\_\_\_

**How Would It Burn?**  
 Day Analyze a Facility

Read each story, then answer the questions about the facility in each situation.

**The children were playing in the yard and the fire was burning in many places and animals. Although the weather has been dry, many small animals and birds have been seen. The weather is so dry that many people from the nearby town are playing in the yard on the edge of the forest.**  
 What conditions are the animals of the yard and in the yard? dry weather, people picnicking

**The local fire department is concerned about the fire in the neighborhood. They are encouraging any safety possible for a person based on the safety of the building.**  
 What conditions are the animals of the yard and in the yard? dry weather, people picnicking

**The neighborhood has a fire and a fire building. The fire is in a 100-year-old house that is a fire and a fire building. The fire is in a 100-year-old house that is a fire and a fire building. The fire is in a 100-year-old house that is a fire and a fire building.**  
 What conditions are the animals of the yard and in the yard? dry weather, people picnicking

**The fire department is concerned about the fire in the neighborhood. They are encouraging any safety possible for a person based on the safety of the building.**  
 What conditions are the animals of the yard and in the yard? dry weather, people picnicking

Name: \_\_\_\_\_

**Be On Guard**  
 Analyze Five Hazards in the Workplace

One of the following sections of the assigned reading is a group. Read 1 to 5 to identify a hazard in the workplace. The hazard is in the workplace. Based on the information in this section, list the hazard in the workplace. (Handwritten notes: Unhappy employees, Unhappy competitors, Financial problems, No alarms or sprinklers, Open to other crimes, etc.)

**1. Unhappy Employees**  
 - Unhappy employees  
 - Unhappy competitors  
 - Financial problems  
 - No alarms or sprinklers  
 - Open to other crimes

**2. High-Rise Buildings**  
 - Large amounts of concrete  
 - No emergency planning  
 - Smokers  
 - Too many electrical appliances  
 - Lack of proper maintenance, especially electrical

**3. Garages And Workshops**  
 - Flammable liquids  
 - Not following directions  
 - Dirty rags  
 - Hot engine parts  
 - Cluttered, oily areas

**4. Stores And Offices**  
 - Electrical equipment  
 - Flammable liquids  
 - Large amounts of combustible items  
 - Dirty areas  
 - Smokers

**5. Autos And Trucks**  
 - Gasoline  
 - Lack of maintenance  
 - Oil and other flammable liquids  
 - Hot engine parts  
 - Not having a fire extinguisher

**6. Industrial Plants**  
 - Electrical equipment  
 - Lack of maintenance  
 - Industrial equipment, especially electrical  
 - Flammable liquids  
 - Carelessness

ANSWER KEY-2

Name \_\_\_\_\_

### My Own Business

Create Alerts Now!

You have been given a special job — make your own version of the class's Fire Safety Learning Laboratory. Your design can be any kind of business you would like, so use your imagination! (You'll typically have hair styles, auto repair stores, computer services, miniature production, clothing stores, restaurants.) Decide which one of the companies described in "Features In The Workplace" that your business interests best. You may like that description to describe the activity.

The NAME of my business is Accept reasonable answers

The purpose of my business is to on all questions

When my business might be LOCATED (small town building, expanded town a block, etc.) \_\_\_\_\_

My JOB in my business is \_\_\_\_\_

The names of people who might be working in my business \_\_\_\_\_

The types of work my workers would be doing \_\_\_\_\_

What would I tell my workers about the dangers in my job area \_\_\_\_\_

List five FIRE HAZARDS with which you might be concerned:

- check that hazards match
- characteristics on business
- listed above.
- \_\_\_\_\_
- \_\_\_\_\_

Write a sentence describing how fire suppression practices could be needed at your place of business:

Answer might include to protect lives or property, to save money.

Under Use All Lower Case, Page 3, Duplicate name, etc.

### Smoke Alarms On Guard

*Be Sure Smoke Alarms Are Different*

Fire experts say that having a working smoke alarm triples your chance of surviving a fire.

- Place at least one smoke alarm on each level (except of the building).
- Place a smoke alarm outside each sleeping area.
- If you have sleeping areas with bedrooms doors closed, place a smoke alarm in each bedroom.
- Test your smoke alarm twice a month. (Match to an important date, such as pay day or the day the electric bill arrives.)
- Change the batteries once a year. (Suggested date: August savings time card change, vehicle, anniversary of alarm installation or moving.)
- For the best warning system, have alarm smoke sensors interconnected so that if one sounds, they all sound. Have the wires that it feeds with, with battery batteries.

Smoke alarms come in a variety of styles. Match the description to the type.

1. Good early warning for smoke and heat	A. ionization B. photoelectric C. both
2. Should be tested once a month	A. battery-powered B. hardwired C. both
3. More effective at detecting smoke from burning fat	A. photoelectric B. ionization C. both
4. More effective at detecting smoldering fires	A. photoelectric B. ionization C. both
5. Should be placed outside sleeping areas	A. photoelectric B. ionization C. both
6. Uses a small light sensor	A. photoelectric B. ionization C. both
7. Uses a small radioactive cell	A. ionization B. photoelectric C. both

Alike or Different

Under Use All Lower Case, Page 3, Duplicate name, etc.

### Home Smoke Alarm Survey

Investigate And Evaluate Alerts

Draw a map of your home. Draw a blueprint circle to show the location of each smoke alarm. If necessary, draw all open areas where other smoke alarms should be located.

Accept reasonable drawings

Check each smoke alarm using the steps in the table below.

Location	Test by pressing test button	Did the alarm sound?	If the alarm did not work, were the batteries changed?	Test again. If the alarm still does not sound, the alarm should be replaced.
1. Possible answers: A	Check when done ✓	Circle one: Yes No	Circle one: Alarm sounded. Batteries were changed. Batteries were not changed.	Circle one: Alarm sounded after changing batteries. Should be replaced because alarm did not sound.
2. B	Check when done ✓	Circle one: Yes No	Circle one: Alarm sounded. Batteries were changed. Batteries were not changed.	Circle one: Alarm sounded after changing batteries. Should be replaced because alarm did not sound.
3. C	Check when done ✓	Circle one: Yes No	Circle one: Alarm sounded. Batteries were changed. Batteries were not changed.	Circle one: Alarm sounded after changing batteries. Should be replaced because alarm did not sound.

Under Use All Lower Case, Page 3, Duplicate name, etc.

Open Book: The Safety's My Job

**ANSWER KEY-3**

Name \_\_\_\_\_

**Outdoor Fire Safety**  
Analysis of Fire Hazards / HAZARD RULES

Read each outdoor fire hazard, then write a rule for outdoor safety that would prevent a fire or burn.

HAZARD	RULE	HAZARD	RULE
<b>Explosives</b> Explosives stored out of containers that may cause fire.	<b>Other reasonable answers may be accepted.</b> Never throw out explosives put explosives in cartons.	<b>Children Smoking</b> Finding pens or lighters in a school hallway is a fire hazard. In other places, you should have a fire drill.	Check local laws before handling. Burn only on calm days.
Hazards caused by the ground while standing outdoors on a hot sunny day.	Never smoke in grassy areas.	When you are working with ropes, wood and nails in the kitchen or outdoors.	Use extreme care to prevent sparks or burnt burn clothes.
Matchboxes that can become out of control when lighting a cigarette and start a fire in the house.	Never throw matches out windows.	If you have a pet or a dog that is afraid of fire.	Escape of trash in another way.
<b>Flammable</b> Flammable gases and liquids when they are out of containers.	Never throw matches, especially in dry weather.	Using a candle in your room that has a melting candle which is melting or falling on the bedding or table in the room.	Burn in open area, clear of brush and grass.
Just fireworks they may be for home use may get out of control.	Water down used fireworks.	<b>Outdoor Cooking</b> Grills should be used outdoors cooking, such as barbecuing, grilling, or roasting meats.	Check local laws before grilling outdoors. Read and follow directions.
The most popular items are made of fireworks that are in use, they can be out of control by fire and smoke.	Water down fireworks with a bucket of water.	Explosives and gas are not used for any purpose. They are only used for fireworks.	Read directions with water. Read and follow directions.
Fireworks are not only used for entertainment, but they can be used for other purposes.	Check local laws, do not use fireworks.	Explosives can be used for other purposes, such as fireworks.	Read directions with water. Read and follow directions.
Many people do not follow fireworks.	Check local laws, do not use fireworks.

**Wanted: Fire Safety Helper!**  
Summary Exercise, Creative Writing Activity

Write the name of the job you might like to do.

Suggested: Fire safety teacher, fire crew member, inspector, fire fighter, building safety engineer, community safety worker, or union safety officer.

Job title: Accept reasonable answers.

Qualification: Write what a fire safety helper would know and be able to do. Write a list of skills and qualifications, such as when you should know about fire, what to do in an emergency, how to be able to operate a fire alarm, for example, or what other jobs they have had.

Take charge person, who knows about fire safety and prevention. Job involves preventing fires and damage.

Accept reasonable answers. Encourage students to focus on skills presented in lesson.

Write a short letter telling why you are qualified to be a fire safety helper. Include the things that you have learned during this study on fire safety. Conclude with a sentence telling why you want to help other people in the area.

Date \_\_\_\_\_

Dear Fire Chief,  
Accept reasonable answers. Encourage students to focus on skills and information presented in unit; however, allow other information as appropriate.

# Fire Safety Technical Manual

## Student Information And Activities On Fire Safety

**Purpose:** The purpose of a technical manual is provide special information that workers need to do their job. Workers often call them "tech manuals." This "tech manual" will teach you about fire safety in places outside your home, such as the workplace and outdoors. This "tech manual" also includes information on the use of technical innovations to detect and put out fires.

During your study of fire safety, your class will pretend to be workers for the Fire Safety Learning Laboratory. Use this study as a chance to learn more about the kind of business in which you might work.

## Background Information

**Definitions:** These words will help explain fire safety.

**Fire:** a chemical process that converts a fuel into other byproducts. This process requires heat, fuel and oxygen, plus the continuation of uninhibited chemical reactions. Also called combustion.

**Flammable:** something that will burn. Generally has the same meaning as combustible.

**Flammable liquid:** a special classification of liquids that are highly flammable or explosive. These liquids typically give off vapors that are explosive at relatively low temperatures.

**Flash point:** the temperature at which vapors from a flammable liquid can catch fire or explode.

➤ The temperature chart at the right illustrates the flash point for several flammable liquids frequently stored in homes.

# Range for Naphth.

Teacher: Use with Lesson One, Page 7. Duplicate for student use.

Name \_\_\_\_\_

## Factors in Ability To Burn

Background Information / Classification Activity

Many factors affect whether something will burn easily or whether it will be more difficult to burn. Two major factors are:

Examples of resources that burn easily :

### 1. What item is made of

plants, trees and grasses

wood and other plant products, such as cotton, paper, many fabrics, vegetable cooking oil, alcohol

petroleum-based products, such as

gasoline, oil, many other flammable liquids, nylon and polyester

Examples of resources that do not burn easily:

metals and rocks

concrete, bricks and similar products

fabrics or wood that has been treated with a flame retardant chemical

Note: Leather and wool generally do not burn as easily as fabrics.

The availability of oxygen is affected by how the item is made.

### 2. Whether oxygen is available

*Example:* A tightly worn cotton shirt allows less oxygen than a loosely woven cotton shirt. Close-fitting clothes allow less oxygen than loose-fitting clothes.

The availability of oxygen can be controlled by where the item

is located. *Example:* Oily rags, which might self-ignite, should be stored in a closed metal container. If a fire should start, the fire will quickly use up the oxygen and die.

## Classification Activity

Look at the following list of items. Classify according to whether it would burn more easily or less easily. Then write each in the appropriate section of the table below.

<p><b>Natural Resource</b></p> <p>forests grasslands petroleum rocks and barren soil</p> <p><b>Buildings</b></p> <p>wood-frame house building built of steel and concrete</p> <p><b>Clothes</b></p> <p>Loose, flowing lace gown close-fitting, tightly woven cotton shirt flame-retardant pajamas</p>
---

Burns more easily	Burns less easily

On a separate sheet of paper, make a complete list of all items in this room or a room at home. Then make a copy of the table above and classify each item on your list.

After you complete your classification table, write a statement telling whether you think a fire might be likely to start in the room.

Teacher: Use with Lesson One, Page 7. Transfer to overhead transparency

Name \_\_\_\_\_

## How Would It Burn?

### Story Analysis Activity

Read each story, then answer the questions about fire safety in each situation.

<p><b>T</b>he wildlands area includes forests and grasslands that are home to many birds and animals. Although the weather has been dry, many small animals and insects flourish. The summer days are long, and many people from the nearby town enjoy picnics in a small park on the edge of the forest.</p> <p>The local fire department is concerned about fire in the wildlands. They are encouraging strict safety guidelines for a petroleum-based chemical storage building that is being built nearby.</p>	<p>List three flammable items from the story: _____</p> <p>_____</p> <p>_____</p> <p>What conditions or characteristics of the wildlands in this story make it easier to burn? _____</p> <p>_____</p>
--	---

<p><b>T</b>he neighborhood has a blend of old and new buildings. Mrs. Harris lives in a 100-year-old frame house that is furnished with wooden antiques and needlework-upholstered furniture. Just down the block, the Garcia family recently built a brick home. They have enjoyed buying modern furniture — leather, brass and glass.</p> <p>Everyone in the neighborhood was glad when a service station was built a few blocks away. The new building is built entirely of concrete blocks. It also has a small store and car wash.</p>	<p>Which one of the two houses would burn more easily?</p> <p>_____</p> <p>Why? _____</p> <p>What characteristic of the new service station might keep a fire from starting? _____</p> <p>_____</p> <p>What characteristic of the service station might make a fire more likely? _____</p> <p>_____</p> <p>Name a flammable liquid that might be found at the service station: _____</p> <p>What is the flash point of the flammable liquid you named? _____</p>
---	--

<p><b>T</b>he drama department's production of "The Night Before Christmas" requires many different types of costumes. Mark, who plays the father, will be wearing close-fitting, wool longjohns and a stocking cap. Mari plays the mother and wears a long, flowing gown and a long housecoat with billowing sleeves.</p> <p>To be properly dressed as Santa Claus, Terence is renting a red suit with boots, hat and beard from a costume company. The company said all their costumes are treated with a flame-retardant chemical.</p> <p>Of course, the students playing the children will wear regular children's pajamas, which are also flame retardant. A federal law says that all children's pajamas must be flame retardant.</p>	<p>Which costumes are less likely to catch fire? _____</p> <p>_____</p> <p>Why? _____</p> <p>Which costumes are more flammable? _____</p> <p>_____</p> <p>Why? _____</p> <p>How could the costumes be changed to make them safer? _____</p>
---	---

Teacher: Use with Lesson One, Page 7. Duplicate for student use.

## Hazards In the Workplace

### Background Information

The Occupational Health and Safety Act and other federal and state laws provide many safeguards that protect workers on the job. However, workers still face many fire hazards:

- ⇒ Arson is the No. 1 cause of fires in many types of businesses.
- ⇒ As in homes, carelessness and ignorance about fire hazards are also problems in the workplace. The fire hazards may be different than fire hazards in the home.
- ⇒ Industrial equipment, such as manufacturing and commercial kitchen equipment, present unique fire and burn hazards.
- ⇒ Many businesses and industries rely on electrical and electronic equipment. This increases the risk of electrical shock and the possibility of electrical or appliance fires and burns.
- ⇒ The large amount of combustible materials, especially in stores and offices, increases the fire hazard for workers.

# Sprinklers

**How they work:** Fire suppression sprinklers are individual spray heads tied into a system of water pipes. When the heat of a fire raises the temperature of a sprinkler head to a certain point (usually 165°F), that sprinkler opens and releases water directly over the source of the heat. Different brands of sprinklers use different methods for opening the sprinkler. Some have a metal link that melts; others have small glass bulbs filled with liquid.

**History of sprinklers:** Sprinklers were invented in 1874 by an American named Henry S. Parmelee to protect his piano factory. During the first half of the 1900s, sprinklers were installed almost exclusively to protect buildings, especially warehouses and factories. Because sprinklers reduced the chance of fire destroying the building, insurance companies charged less to insure buildings with sprinklers. The lower cost of insurance helped companies pay for installing sprinklers.

During the last 20 years, building owners have installed sprinklers in more types of buildings, especially high-rise office buildings, hotels and apartments. Some cities and states adopted laws requiring sprinklers in certain types of buildings. In 1990, the U.S. Congress passed a law that requires hotels taller than three stories to have sprinklers.

Fire sprinklers are designed to contain the fire — to put it out or keep it from getting dangerously large until fire fighters arrive to spray additional water. Sprinkler systems are also connected to alarms to warn of the fire.

Each sprinkler protects its own area. The sprinkler sprays water only when the temperature in the immediate area is hot enough. Most fires in sprinklered buildings are handled by one or two sprinklers. Sprinklers work automatically. They do not have to rely on people to notice the fire or hear an alarm and then remember how to turn on the system.

### The Basic Parts And Operation Of A Sprinkler

Teacher: Use with Lesson Two, Page 8. Duplicate for student use.

## Hazards In the Workplace Continued

### Selected Safety Guidelines

#### Autos and Trucks

Many people use their cars while working or drive cars or trucks for a living. Follow this checklist to keep your auto fire safe.

**Remember that gasoline is an explosive!** That's what makes it a good motor fuel when used safely. Gasoline produces a flammable vapor at low temperatures, and the vapors can burst into flame very easily. Treat gasoline with respect:

- Never use a match or carry a lit cigarette near gasoline, especially at a service station.
- Carry gasoline only in approved metal containers with a pressure-relief, self-sealing cap. Never put gasoline in plastic or glass containers.
- Never carry gasoline or an empty gasoline can in your car.
- Immediately clean or remove any item on which gasoline spills.

**Keep the car or truck in good repair.** Follow the manufacturer's recommended schedule for maintenance, such as oil changes, radiator fluid changes or tune ups.

**Keep a fire extinguisher in the car or truck, and know how to use it.** Keep a fire extinguisher near the driver's seat.

**Remember that oil and other auto fluids are also combustible.** Discard used products safely at an approved disposal site or recycler. Never pour these liquids on the ground or in the trash can. Not only does that create a fire hazard, it also harms the environment.

**Be aware that any mechanical part of an auto or truck can burn you.** Any part of the engine, accessories or exhaust system can cause second-degree or worse burns even from slight contact.

#### High-Rise Buildings

Many office employees work in high-rise buildings. Many people live in multi-story apartment buildings, and many of us have stayed in large hotels.

All these people face special fire hazards. There are many more people; it takes longer to escape; and there are more combustible materials, such as carpet, furniture and supplies.

Here are some other guides for people who live and work in high-rise buildings:

**Know where fire-exit stairways are located.** Memorize at least two ways to each stairway. NEVER use the elevator in a fire emergency.

**Know what the fire alarm sounds like, and respond as if there were a real fire every time you hear it.** Never think it's just a false alarm.

**Have fire emergency exit drills.**

**Tell the building owners to:**

- check the alarm system regularly,
- keep fire exit stairways clear,
- have the building inspected,
- keep all electrical equipment and wiring working properly,
- have fire exit drills,
- maintain the fire suppression sprinkler system
- mark all exits and dangerous areas, such as electrical rooms and chemical storage.

**Be a safe worker by:**

- disposing of all cigarettes and matches properly (always check ash trays and waste cans for smoldering materials),
- not plugging too many appliance into electrical outlets and

**If you have a disability, make arrangements with co-workers and the building owner for help in emergencies.** You should have a partner who can help you in an emergency.

Teacher: Use with Lesson Two, Page 8. Duplicate for student use.

## Stores and Offices

Employees and customers encounter fire hazards in stores and offices. How can they be more fire safe?

**Avoid actions that might cause fires in electrical wires or trash.**

- Don't overload electrical circuits.
- Keep electrical equipment in good repair.
- Use precautions to prevent trash fires.

**Be aware that automobile-related businesses usually contain fire hazards, especially gasoline or other flammable liquids.** These businesses include body paint shops, repair shops, auto dealerships, service stations, car washes and accessory shops. **NO SMOKING**, and observe other safety measures.

**Recognize that supermarkets, department stores, variety stores -- in fact, any store -- have large quantities of combustible material.** Don't smoke in stores, and be cautious with flammable materials.

## Arson

Arson is the most frequent cause of commercial fires. Because fire damage affects the entire business, all employees should be concerned with preventing arson. These tips could help your business:

**Reduce opportunities for deliberately set fires. Be sure that:**

- All exterior areas are well lit and all entrances are secure.
- Smoke or fire detectors and sprinklers are installed to quickly detect and control fires that might occur.
- Flammable and hazardous materials are stored properly, in locked cabinets if necessary.
- Many fires are set to cover up other crimes, such as burglary. Reducing the opportunity for those crimes reduces your risk of arson too.

**Identify possible firesetters.** Be aware of unhappy employees or competitors.

**Don't use fire insurance to solve financial problems.** Some business owners set their businesses on fire to collect insurance money.

## Garages and Workshops

Many people are employed in garages and workshops. Here are some guidelines for their safety:

**Store flammable liquids in approved metal containers.** Look for the label of a testing laboratory, such as UL.

**Know what products in the garage are flammable. USE ONLY FOR THEIR INTENDED PURPOSE.** Read and follow all labels! **Never use gasoline as a cleaning fluid or fire starter.**

**Never use or store flammable liquids inside the garage or in any closed-in area.**

**When priming a carburetor with gasoline, do not spill gasoline on hot engine parts.**

**Dispose of used flammable liquids properly.** Don't save used oil, cleaner fluids, etc., and never pour on the ground. Discard only in approved disposal locations.

**Use caution with any materials that are soiled by flammable liquids.** Keep oily rags and clothes away from any heat source, especially cigarettes and hot engine parts. Because oily rags can catch fire without any other heat, store them in metal containers with tight-fitting lids. Better yet, clean or discard all oily rags.

**Wear long sleeves and pants when near a hot engine or exhaust parts.** This will reduce possible exposure. The slightest touch can result in a serious burn.

**Use all power tools properly.** Keep away from water to avoid electrical shock.

**Operate gas-powered lawn mowers and other tools properly.** Never refuel a hot engine! Wait until the engine cools before adding gasoline.

**Keep the garage clean and organized.** This reduces the opportunity for combustible items, such as paper, rags and trash, from contacting heat sources. **And keep a fire extinguisher, preferably Class ABC or ABCD, readily available.**

# Industrial Plants

The equipment and materials in many businesses present many hazards. Here are some guidelines for industrial and commercial workers:

**Watch electrical equipment, power lines and wiring carefully.** Problems with electrical wiring or equipment are a leading cause of commercial fires. Watch for damaged wiring. Don't overload circuits.

**Maintain all equipment properly.** Follow manufacturers' guidelines to operate, maintain and repair equipment. This will reduce the risk of fire from break-downs.

**Be VERY careful with heat sources, such as welding and cutting torches, hot equipment and discarded cigarettes and matches.** Always be aware of nearby combustible materials, and clear the area before you handle a potential heat source. Follow employer guidelines.

**Be careful with all flammable liquids, especially gasoline, paint and solvents.** Store them in the proper containers. Use airtight metal cabinets, and lock the cabinets if necessary. Be sure all fueling equipment, such as gasoline pumps, is in good condition.

## Smoke Alarms At Work / How Smoke Alarms Work

Background Information (Source: Texas Fire Incident Reporting System)

### Smoke Alarms at Work

Smoke Alarms In Fatal Fires in 1999

## Residential Smoke Alarm Performance in 1999

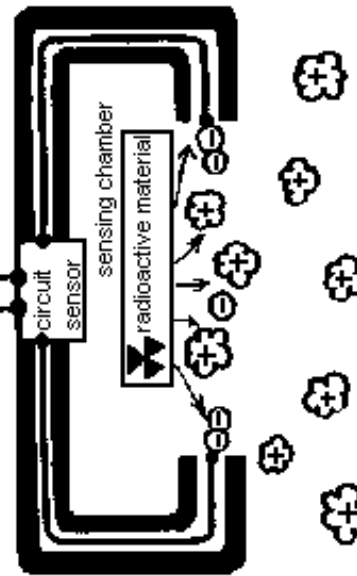

**How Smoke Alarms Work:** Both types of smoke alarms need electricity to operate. They use batteries or are directly connected to the building's electrical wiring (called "hard-wired").

## Ionization Smoke Alarm

When smoke enters the sensing chamber, smoke particles get in the way of the electrons, breaking the circuit. A sensor in the circuit tells the alarm to sound.

Responds faster to small smoke particles from a flaming fire

## Photoelectric Smoke Alarm

When smoke enters the sensing chamber, light reflects off smoke particles and hits the light sensor. The light sensor tells the alarm to sound.

Responds faster to larger smoke particles produced by smoldering fires

Name \_\_\_\_\_

## Smoke Alarms On Guard

### Helping Smoke Alarms Do Their Job

- Place at least one smoke alarm **on each level (story)** of the building.
- Place a smoke alarm **outside each sleeping area**.
- If your family sleeps with bedroom doors closed, place a smoke alarm in each bedroom.
- Test each smoke alarm once a month.** (Match to an important date, such as pay day or the day the electric bill arrives.)
- Change the batteries once a year.** Suggested dates: daylight savings time clock change, birthday, anniversary of alarm installation or moving.
- For the best warning system, have alarm smoke alarms interconnected so that if one sounds, they all sound. Have the alarms wired to house wiring, with backup batteries.

**Fire experts say that having a working smoke alarm triples your chances of surviving a fire.**

Smoke alarms come in a variety of options. Match the description to the type.

Teacher: Use with Lesson Three, Page 9. Duplicate for student use.

1. Good early warning for smoke and fires	A. battery-operated B. hard-wired C. both
2. Should be tested once a month	A. battery-operated B. hard-wired C. both
3. More effective at detecting smoke from flaming fire	A. photoelectric B. ionization C. both
4. More effective at detecting smoldering fires	A. photoelectric B. ionization C. both
5. Should be placed outside sleeping areas	A. photoelectric B. ionization C. both
6. Uses a small light sensor	A. photoelectric B. ionization C. both
7. Uses a small radioactive cell	A. photoelectric B. ionization C. both

## Outdoor Fire Safety

Analysis of Fire Hazards / Related Rules

Read each outdoor fire hazard, then write a rule for outdoor fire safety that would prevent a fire or burn.

Hazard	Rule
<b>Cigarettes</b>	
Cigarettes thrown out of car windows start many grass fires.	_____
Ashes dropped on the ground while standing outdoors can start a grass fire.	_____
Matches that are thrown out of car windows after lighting a cigarette can also start a grass fire.	_____
<b>Fireworks</b>	
Fireworks create a lot of heat when they are set off.	_____
Used fireworks stay very hot for hours after they are set off.	_____
You can't predict where some kinds of fireworks (like rockets) will go when they are set off.	_____
July is a popular time to set off fireworks, but July is usually very hot and dry, creating dry grass and brush.	_____
Fireworks are usually allowed only outside of cities, farther away from fire stations.	_____
Many cities do not allow fireworks.	_____

Hazard	Rule
<b>Outdoor Burning</b>	
Burning trash or leaves is against the law in some cities. In other cities, you must have a special permit.	_____
When you are burning trash or leaves, wind can cause the fire to spread out of control.	_____
If a fire that you start gets out of control and damages someone else's property, you could be charged with arson.	_____
All fires create air pollution.	_____
Using a barrel to burn trash near trees or a building could catch the building or trees on fire.	_____
<b>Outdoor Cooking</b>	
Some cities do not allow outdoor cooking, such as barbecues or grills, especially in apartment buildings.	_____
Barbecues and grills use fuel that can be very dangerous. They must be used correctly.	_____
Charcoals can stay very hot for a long time unless they are completely put out.	_____
Lighter fluids and fire starters are very dangerous. They must be used correctly.	_____

Name \_\_\_\_\_

### **Wanted: Fire Safety Helper**

Summary Exercise / Creative Writing Activity

 On the line below, write the name of the job you might like to have.

**Suggestions:** Fire safety teacher, fire prevention inspector, fire fighter, building safety engineer, community safety worker. Or create your own title.

**Job title:** \_\_\_\_\_

**Qualifications:** Write what a fire safety helper must know and be able to do. Make a list of at least five qualifications, such as what he/she should know about fires, what tools or equipment he/she should be able to operate (smoke alarm, for example), or what other jobs he/she has had.

---

---

---

**You can be a fire safety helper.**

 Write a short letter telling why you are qualified to be a fire safety helper. Include five things that you have learned during this study on fire safety. Conclude with a sentence telling why you want to help other people be fire safe.
