

Texas Automobile Insurance Plan Association
2020 Commercial Vehicle Rate Filing
Explanatory Memorandum

Introduction

TAIPA is proposing changes in base rates for commercial vehicles that will generate an estimated overall change of +4.8% in commercial vehicle premiums. No changes in any rate factors for commercial vehicles are being proposed in this filing.

Background

The following Table 1 presents the number of Texas assigned risks reported for 2015 through 2018. For the latest four years, TAIPA's insured exposure counts have remained very low and relatively stable from year to year.

The 2018 exposure counts are the latest available statistical data. The commercial vehicle exposure counts are provided by the ISO. The exposure counts in Table 1 are earned car years (i.e., the equivalent of one vehicle insured for 12 months) for the BI Liability coverage.

Table 1: TAIPA Bodily Injury Exposure Counts

<u>Type of Vehicle</u>	<i>BI Liability Earned Car Years</i>			
	<u>2015</u>	<u>2016</u>	<u>2017</u>	<u>2018</u>
Non-Zone Rated:				
Trucks, Tractors, Trailers	350	300	239	260
Taxis, Limousines	228	190	144	111
School, Church Buses	101	83	65	53
Other Buses	121	108	85	73
Van Pools	0	1	1	1
Zone Rated:				
Trucks	0	0	0	0
Public Autos	0	0	0	0

As would be expected, the exposure counts for the PD Liability coverage are nearly identical to the BI Liability exposure counts shown in Table 1 for all types of vehicles. Only about one-third of the trucks insured through TAIPA are insured for either PIP, UMBI, or UMPD.

While a low count of insureds for TAIPA is the desirable situation, the low count does create challenges to traditional ratemaking procedures. The low count of insured vehicles means there are not enough historical claim losses to provide a credible database of assigned risk claim losses that are necessary to apply traditional actuarial ratemaking procedures.

Proposed Commercial Vehicle Rates

Basis for Proposed Rate Changes

For several years prior to its 2015 rate filing, TAIPA's commercial vehicle rates were derived directly from the voluntary market loss costs filed in Texas by the ISO. During that era, TAIPA subscribed to the ISO loss costs and the actuarial staff of the TDI used those loss costs to calculate TAIPA's commercial vehicle rate schedule. By 2015 this approach was no longer cost-effective for TAIPA. With so few insured commercial vehicles, the ISO subscription fees, when expressed on a per insured vehicle basis, were no longer economically reasonable.

Beginning with its 2015 rate filing, TAIPA began tracking the annual change in the voluntary market's loss costs and using those loss cost changes as the basis for its annual rate changes. TAIPA originally anticipated that the annual change in the three-year average loss costs for the voluntary commercial vehicle market would provide a sufficiently reliable and credible indication of the actual trend in Texas loss costs.

TAIPA's original anticipation of reasonable stability in the voluntary market's three-year average loss costs has never been realized. Instead we have observed large, random swings in the three-year loss costs for commercial vehicles. Some of the random variation was undoubtedly due to TAIPA's need to subdivide the aggregate commercial vehicle loss data into eleven (11) categories of commercial vehicles.

For three previous rate filings TAIPA attempted to remove some of the random variation by normalizing the data for distribution shifts between territories and for the effects of year-to-year changes in the insurers that report their data to the ISO. None of those past attempts to remove distortions in the commercial loss cost data were fruitful. Even after attempting to remove some of the variations in the loss cost data, the adjusted three-year average loss costs were highly variable with insufficient credibility for ratemaking purposes.

TAIPA is no longer attempting to remove any distorting effects of either the territory distribution shifts or the year-to-year changes in insurers that report commercial loss data. TAIPA is now relying entirely on the year-to-year percentage changes in the commercial vehicle loss costs filed with the TDI by the ISO. In TAIPA's judgment the percentage change in ISO loss costs, filed with and accepted by the TDI, provides the most reliable measure of both the magnitude of the industrywide annual change in commercial vehicle loss costs in Texas and the magnitude of the change in commercial vehicle rate levels in the voluntary market.

It must be emphasized that TAIPA is not adopting ISO loss costs, as it did prior to 2015, or in any way developing its rate schedule or rate change indications derived from ISO loss costs. TAIPA does not review or refer to ISO's filed loss costs. TAIPA is simply monitoring the overall annual percentage change in commercial vehicle loss costs reported by ISO in its loss cost filings with the TDI. It is TAIPA's

judgment that the annual percentage change in ISO loss costs best approximates the annual change in the industry's loss costs for commercial vehicles.

It has been TAIPA's policy since 2015 to limit its annual rate changes to no more than +5% for both private passenger and commercial vehicles. In recent years, ISO's commercial vehicle loss costs have been increasing significantly more than 5% per year. This means that TAIPA's commercial vehicle rates have not been keeping pace with the industry's commercial vehicle rates and loss cost trends. Due to the very low number of commercial vehicles insured by TAIPA, TAIPA is once again opting to limit its proposed rate change to no more than +5%.

In its 2019 Loss Cost filing for commercial vehicles, ISO filed a 12.6% increase in liability loss costs for trucks and a 9.7% increase in liability loss costs for private passenger type commercial vehicles. ISO filed no change in loss costs for the personal injury protection and uninsured motorist coverages. Based on the 2019 ISO loss cost changes, which were accepted by the TDI, TAIPA is proposing an across-the-board increase in its liability base rates of +5% and no changes to its rates for the personal injury protection and uninsured motorist coverages.

Proposed Rate Changes

The following Table 2 provides a summary of TAIPA's proposed commercial base rate changes by type of commercial vehicle. TAIPA is proposing only base rate changes with no changes being proposed to any territory or class rate factors. The proposed base rates and the base rate changes for each territory are presented in Exhibits I - XI.

Table 2: Proposed Commercial Vehicle Rate Changes

<u>Coverage</u>		<u>Proposed Rate Change</u>	<u>Coverage</u>		<u>Proposed Rate Change</u>
Non-Zone Rated:					
Trucks	BI	+5.1%	Trucks Zone 9	BI	+5.0%
	PD	+4.9		PD	+5.0
	PIP	0.0	Trucks Zone 13	BI	+5.0
Taxis/Limos	BI	+5.0		PD	+5.0
	PD	+5.0	Trucks Zone 43	BI	+5.0
	PIP	0.0		PD	+5.0
Sch./Ch. Buses	BI	+4.8	Public Autos Zone 9	BI	+5.0
	PD	+5.1		PD	+5.0
	PIP	0.0	Public Autos Zone 13	BI	+5.0
Other Buses	BI	+5.0		PD	+5.0
	PD	+5.0	Public Autos Zone 43	BI	+5.0
	PIP	0.0		PD	+5.0
Vans	BI	+4.9			
	PD	+5.1			
	PIP	0.0			

In order to calculate the overall average rate level for commercial vehicles, TAIPA needs a premium distribution by type of commercial vehicle. Such data are not provided in the ISO data reports. TAIPA derives the needed premium distribution based on its estimate of “base premiums”, which are defined as the number of exposure units times the current average base rate for each coverage and type of vehicle. The calculation of the premium distribution used in the following Table 3 is presented in Exhibit XII.

Table 3: Total Commercial Rate Change

<i>Coverage</i>	<i>Proposed Premium Change</i>	<i>TAIPA Premium Distribution</i>
BI Liability	+5.0%	.556
PD Liability	+5.0%	.400
PIP	0.0%	.014
UMBI	0.0%	.014
UMPD	0.0%	.015
All Coverages	+4.8%	.999
