

MAXIMUM FRAME	DP	IMPACT					
74" x 62"	+50/-50	YES					
WINDZONE 4							

Installation Notes:

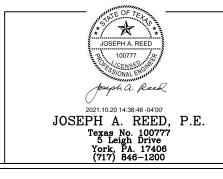

- 1. Seal flange/frame to substrate. Sill shall be set on a continuous serpentine bead of structural grade silicone caulk when no fastener is used to anchor the sill (typical).
- 2. Use #8 PH or greater fastener through the nailing flange with sufficient length to penetrate a minimum of 1 1/2" into the wood framing. For 2x wood frame substrate (min. S.G. = 0.42)
- 3. Host structure (wood buck, masonry, steel) to be designed and anchored to properly transfer all loads to the structure. The host structure is the responsibility of the architect or engineer of record for the project of installation.

General Notes:

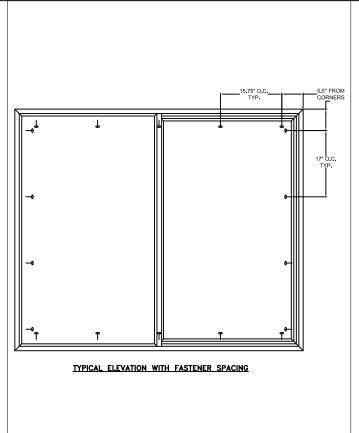

- The product shown herein is designed, tested and manufactured to comply with the wind load criteria
 of the 2018 International Residential Code (IRC) and 2018 International Building Code (IBC).
- All glazing shall conform to ASTM E1300.
- 3. At minimum, glazing shall be 5.0mm annealed 9.0mm airspace 3.0mm annealed glass / 2mm PVB by Kuraray / 3mm annealed glass.
- 4. Use structural or composite shims where required.

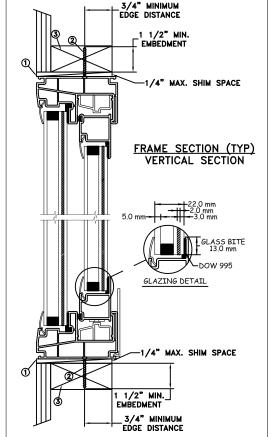

This schedule addresses only the fasteners required to anchor the unit to achieve the rated design pressure and impact performance (where applicable) up to the size limitations noted. It is not intended as a guide to the installation process and does not address the sealing consideration that may arise in different wall conditions. For the complete installation procedure, see the instructions packaged with the unit or go to www.jeld-wen.com.
