

TDI **InsurED**

TEXFIRS program

October 11, 2022

- Texas Fire Incident Reporting System (TEXFIRS) / National Fire Incident Reporting System (NFIRS)
- 2021 Data
- Documenting a complete incident
- Data quality
- Data use
- Reporting in NFIRS
- Online tools and resources

TDI | TEXFIRS program

- Texas State Fire Marshal's Office
- [Texas Government Code Section 417.0052](#)
- Compiles statistical data from NFIRS

Reporting to NFIRS is reporting to TEXFIRS

- State-level representatives for NFIRS.
- Ensure data quality.
- Provide training.
- Upload incident reports to the NFIRS database.

- NFIRS is the world's largest, national database of fire incident information.
- Every U.S. state and the District of Columbia report NFIRS data.
- NFIRS comprises about 70% of all reported fires that occur annually.
- 24,000 fire departments reported 30 million incidents, including 1.2 million fires in NFIRS.

TDI | Texas reported incident facts

There are over 1,800 Texas fire departments. Less than 50% reported.

877

Fire departments reported

84,751

Fires

2.6 million

Incidents

\$769.5 million

Fire loss

2021 calls by category

Type	Fires	Percent of all fires
100s – Fires	84,751	3.3%
200s – Overpressure, explosions	2,688	0.1%
300s – EMS	1,720,316	67.5%
400s – Hazardous conditions	72,366	2.8%
500s – Service calls	218,326	8.6%
600s – Good intent calls	293,941	11.0%
700s – False alarm, malicious	172,357	6.8%
800s – Weather, natural disasters	1,736	0.1%
900s – Special incidents	8,035	0.3%

2021 reported fires

Type	Fires	Percent of all fires
Structure	26,631	32%
Vehicle	14,218	17%
Natural vegetation	21,422	25%
Outdoor rubbish	15,551	18%
Other	6,929	8%

TDI | How is your fire department reporting?

- Is your department reporting?
- Are all calls documented?
- Are reports accurate?
- Is all known information provided?
- Do you review reports?
- Do you misuse “unknown”, “undetermined”?
- Are reports updated?
- Is your data reliable?

TDI | A complete incident report

Facts

Cause of ignition:

- Heat source
- Contributing factors
- Area of origin
- Contributing equipment
- Dollar loss

Updates

- Good data requires updates.
- Update the incident report even after it is submitted.

TDI | Good data is...

- **Timely:** Entered soon after the fire incident occurs.
- **Accurate:** Accurate as possible. Update as information becomes available.
- **Reliable:** Incident types are added using the same codes, terms, and according to NFIRS coding guides.
- **Complete:**
 - All required fields.
 - All fields needed to report the incident details and response.

2021 unresolved fires

8%

■ Other

1,408

23%

TDI | Why is reporting incidents important?

- Illustrates the magnitude of the fire problem.
- Indicates fire severity.
- Targets fire prevention programs.
- Evaluates the cost effectiveness.
- Determines the amount of money that should be spent.
- Better data reduces fires, which reduces risk to firefighters.

TDI | Dollar loss estimate

- Dollar loss is an estimation.
- Include contents damaged by fire, smoke, water, and overhaul.
- Don't include indirect loss, such as business interruption.
- Leave fields blank when the value is unknown.
- Use the [International Code Council's building valuation data formula](#).

TDI | Texas loss statistics

In 2021, there were 84,751 reported fires.

\$562.4 million
in property loss

\$239.9 million
in contents loss

\$802.3 million
in total loss

TDI | Data quality

- Adopt a standard operating procedure.
- Designate a “data champion” to ensure quality control.
- Be diligent in entering complete and accurate data and correcting any errors that come up.

TDI | Valid vs. invalid incidents

Incident Valid Status	Total	Percent
No Activity	155	N/A
Valid	2,513,238	98%
Invalid	61,465	2%
Grand Total	2,574,703	100%

Incident data supports justifications for a fire department's resources and training needs, such as:

- Plan station relocations
- Train personnel
- Funding program requirements
- Justify budgets
- Fire prevention programs
- Legislation

TDI | Who uses this data?

- Even if you don't personally use data directly, somebody is still looking at numbers, still working on a product, still trying to quantify the fire problem.
- Decisions are made based on the information that is and that is NOT in the reporting system.
- Federal programs
- Private industry organizations
- National associations for home appliance product manufacturers
- Hotel and motel industry
- Insurance companies, attorneys, and many others

TDI | How to register for a NFIRS user ID

Visit the [FEMA NFIRS website](#):

- Select **Register as a State or Local User**.
- Enter your information and submit.
- You will receive an email from TEXFIRS to complete your registration.

NFIRS State & Local Users and Vendor Login

ALL fields are required. Not yet registered? [Register as a State & Local User](#) OR If you are a vendor, please contact [NFIRS Support Center](#).

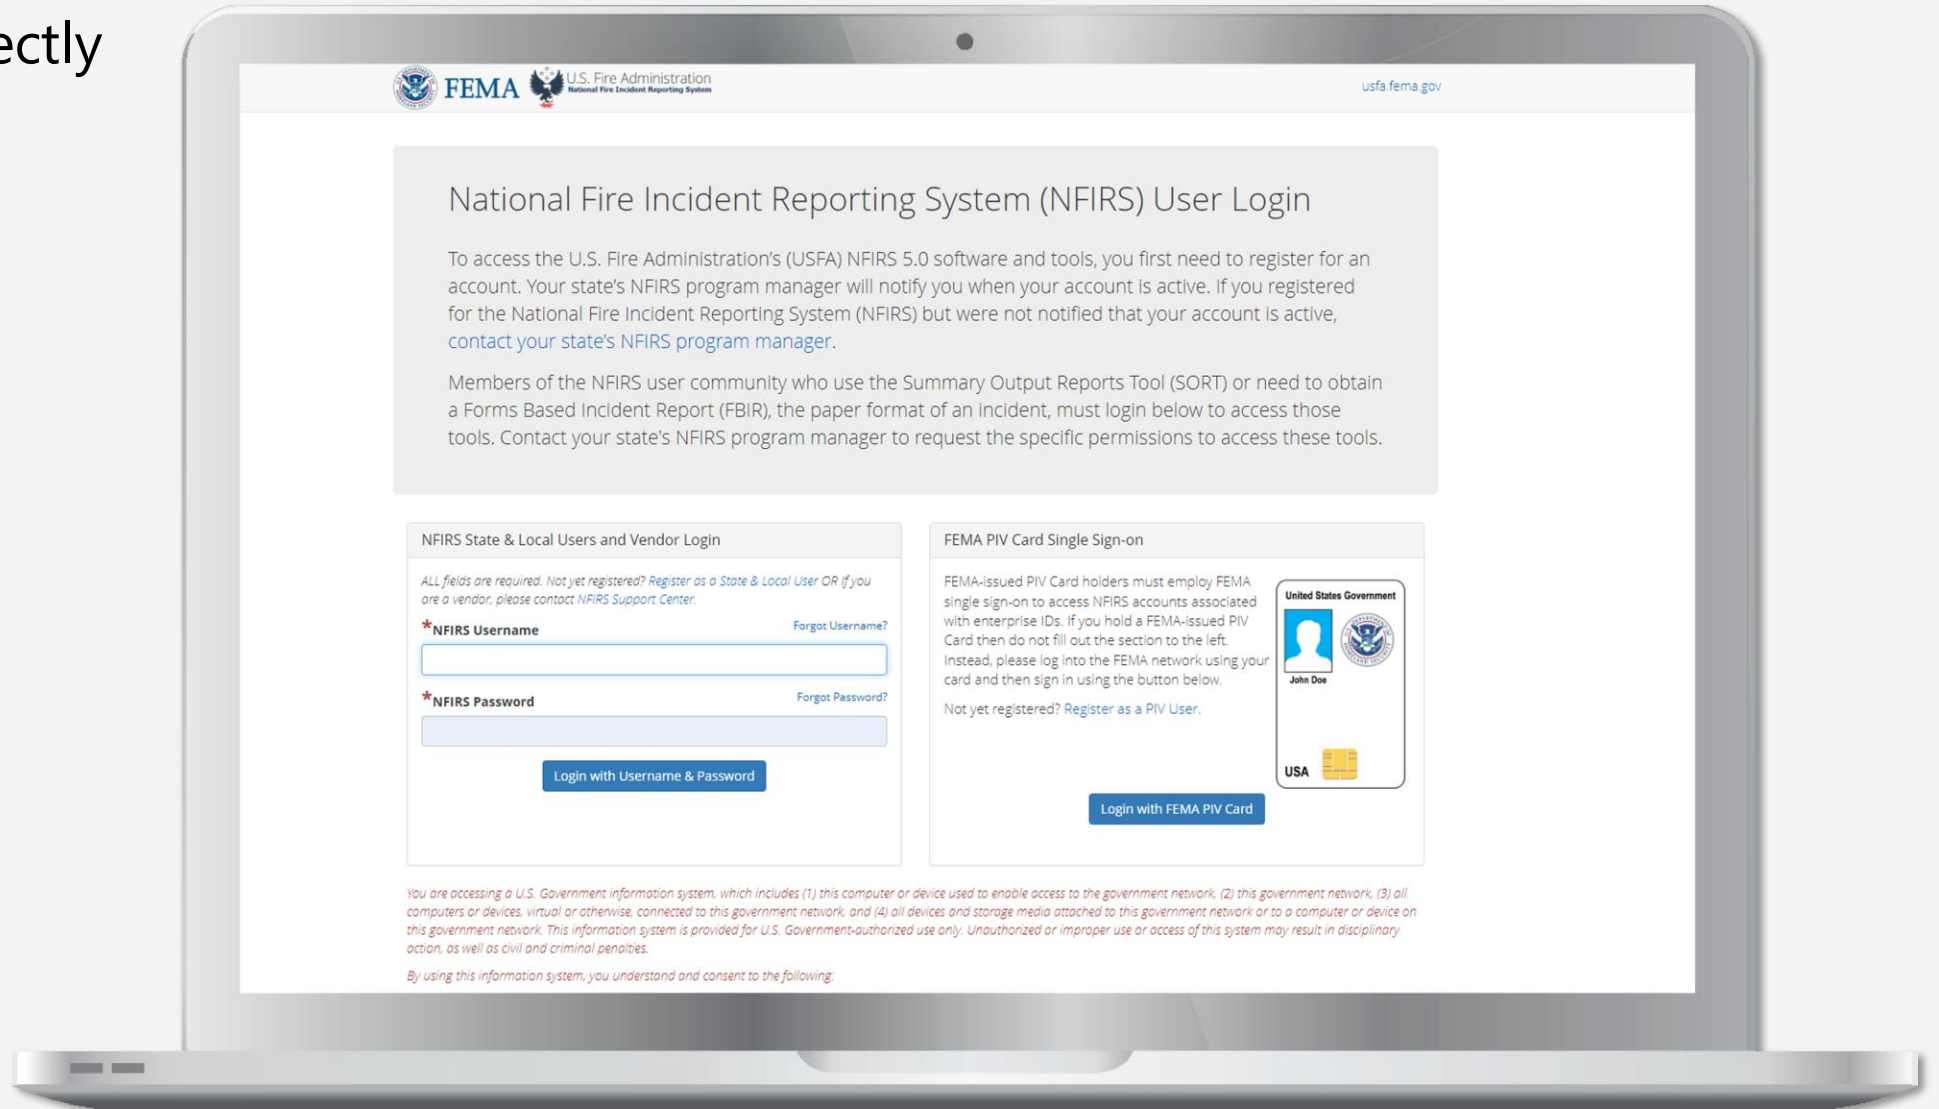

***NFIRS Username** [Forgot Username?](#)

***NFIRS Password** [Forgot Password?](#)

TDI | Reporting directly to NFIRS

Enter incidents directly into eNFIRS.

- Log in to eNFIRS
- Click on Incidents.
- Create incident.

The screenshot shows the NFIRS User Login page on a laptop. The page header includes the FEMA logo, the U.S. Fire Administration logo, and the text "National Fire Incident Reporting System" and "usfa.fema.gov". The main heading is "National Fire Incident Reporting System (NFIRS) User Login". Below the heading is a paragraph explaining that users need to register for an account and that state NFIRS program managers will notify them. A second paragraph states that members using the Summary Output Reports Tool (SORT) or needing a Forms Based Incident Report (FBIR) must login to access those tools. The page is divided into two main login sections: "NFIRS State & Local Users and Vendor Login" and "FEMA PIV Card Single Sign-on". The first section has fields for "NFIRS Username" and "NFIRS Password", both with "Forgot" links. The second section has a "Login with FEMA PIV Card" button and a graphic of a PIV card for "John Doe". At the bottom, there is a disclaimer about accessing a U.S. Government information system and a consent statement.

NFIRS State & Local Users and Vendor Login

ALL fields are required. Not yet registered? Register as a State & Local User OR if you are a vendor, please contact NFIRS Support Center.

*NFIRS Username [Forgot Username?](#)

*NFIRS Password [Forgot Password?](#)

Login with Username & Password

FEMA PIV Card Single Sign-on

FEMA-issued PIV Card holders must employ FEMA single sign-on to access NFIRS accounts associated with enterprise IDs. If you hold a FEMA-issued PIV Card then do not fill out the section to the left. Instead, please log into the FEMA network using your card and then sign in using the button below.

Not yet registered? Register as a PIV User.

United States Government
John Doe
USA

Login with FEMA PIV Card

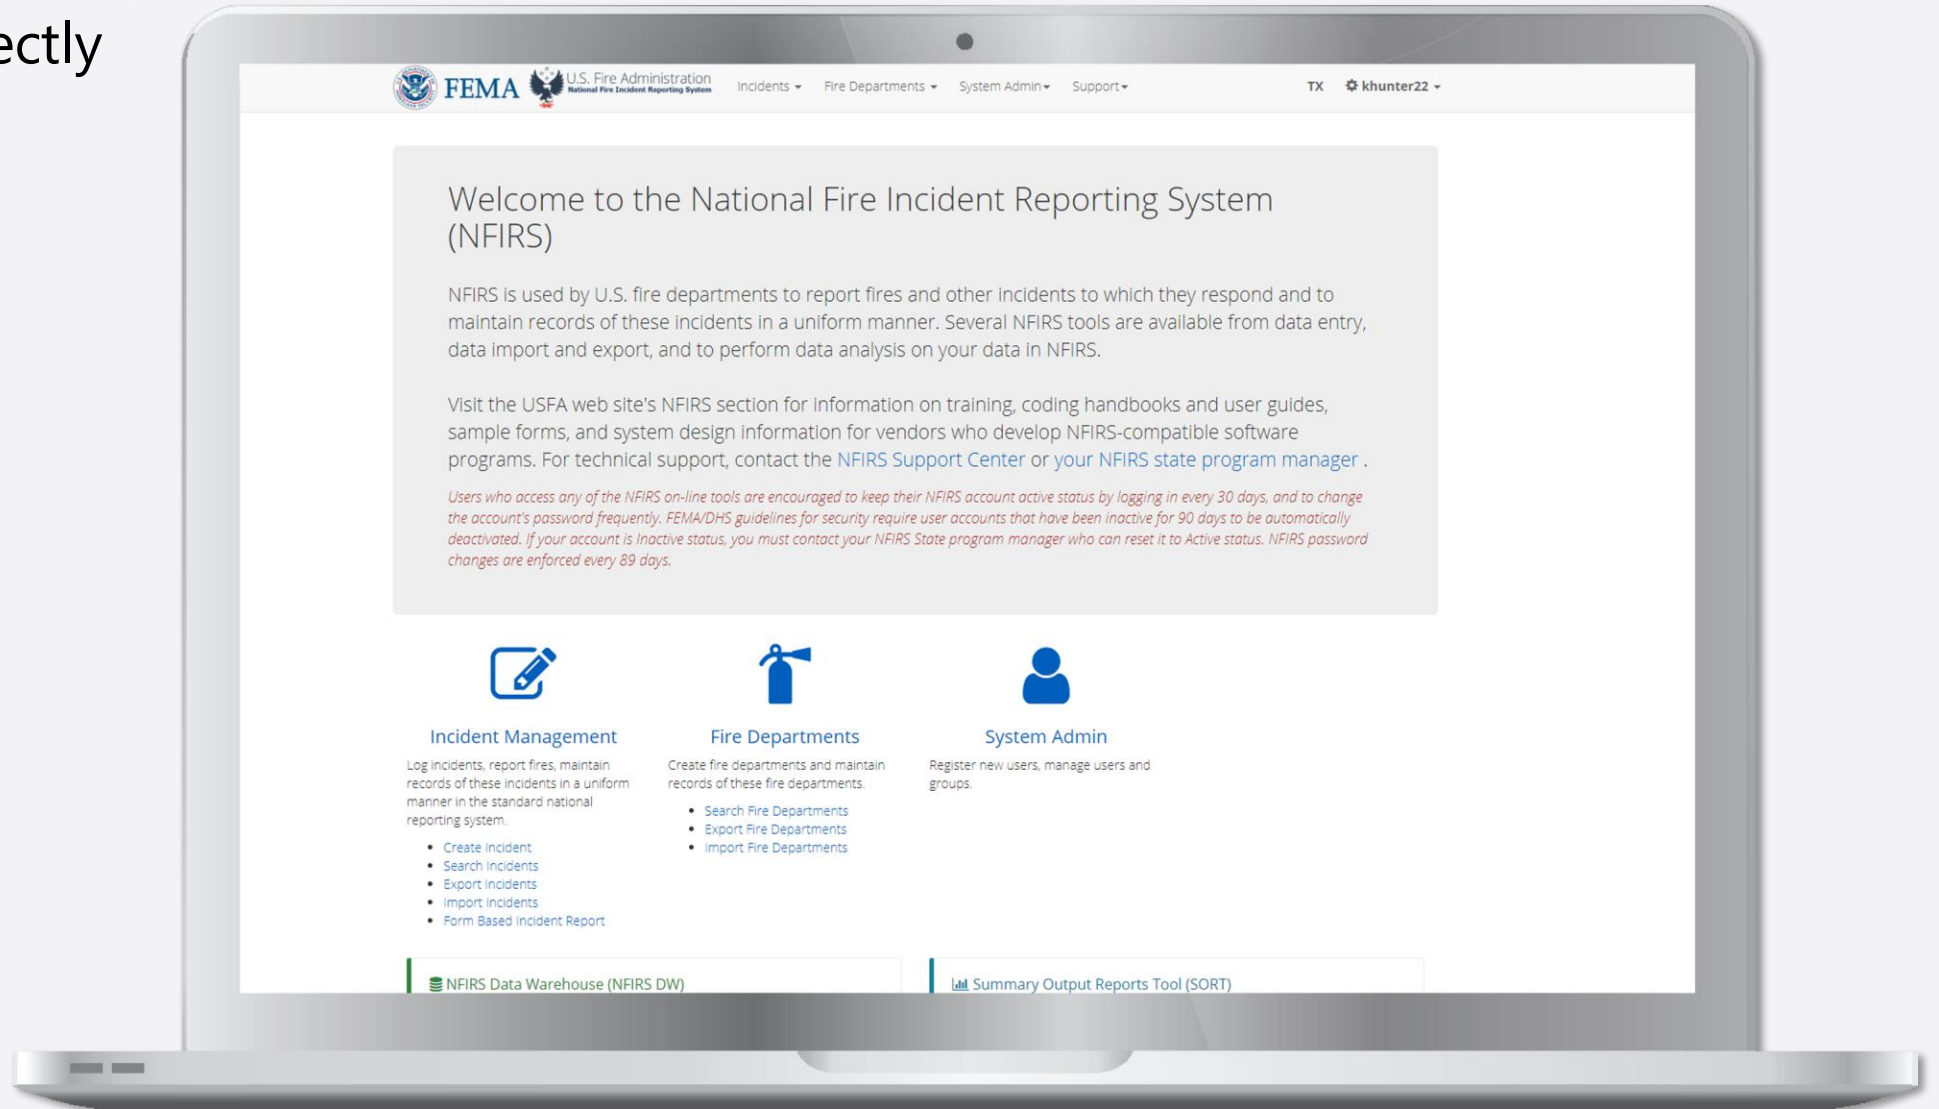

You are accessing a U.S. Government information system, which includes (1) this computer or device used to enable access to the government network, (2) this government network, (3) all computers or devices, virtual or otherwise, connected to this government network, and (4) all devices and storage media attached to this government network or to a computer or device on this government network. This information system is provided for U.S. Government-authorized use only. Unauthorized or improper use or access of this system may result in disciplinary action, as well as civil and criminal penalties.

By using this information system, you understand and consent to the following:

TDI | Reporting directly to NFIRS

The screenshot shows the FEMA eNFIRS 'Edit Incident' form. The header includes the FEMA logo and 'U.S. Fire Administration National Fire Incident Reporting System'. Navigation links for 'Incidents', 'Fire Departments', 'System Admin', and 'Support' are visible. The main heading is 'Edit Incident', followed by a note: 'Red asterisk (*) indicates a field is required.' The 'Key Information' section contains several required fields: 'Incident Number' (with placeholder 'Incident Number'), 'Incident Date' (with value '09/27/2022'), 'Exposure Number' (with value '000'), 'Fire Department State' (with value 'TX'), 'Station' (with placeholder 'Station'), and 'Fire Department ID' (with value 'WP801 Austin FD'). A 'No Activity' checkbox is also present. On the right side, there is an 'Incident Details' sidebar with a 'Key Information' section containing 'Back to top', 'Close', 'View Errors', 'Save', and 'Delete' buttons, and 'Create Exposure', 'PDF', and 'Back' buttons. Below this, it shows 'OMB no. 1660-0069' and 'Expiration date: June 30, 2024'. The 'Incident History' section lists 'Last Exported Date:', 'Incident Last Updated:', 'Last Saved By:', 'Original Save Date:', and 'Originally Saved By:'.

TDI | NFIRS – Bulk Import Utility Tool

Use the bulk import utility tool.

The screenshot shows the 'Bulk Import Utility' page within the FEMA U.S. Fire Administration National Fire Incident Reporting System. The page header includes the FEMA logo, 'U.S. Fire Administration National Fire Incident Reporting System', and navigation links for 'Incidents', 'Fire Departments', 'System Admin', and 'Support'. The user is logged in as 'khunter22' from Texas (TX).

Bulk Import Utility

Bulk Import Incidents
Select the incident information files to be imported to the National Database. The email address below will receive import results.

Note: To import fire department information files, select the Import Fire Departments link above.

Important: Please note that an incident occurring on or after 01/01/2005 will be marked as invalid if overwritten with invalid incident data regardless of its previous validation state.

Caution: Uploading the same file more than once further delays the processing of the data.

The red asterisk (*) denotes a required field.

***Email Address**
e.g., john.doe@gmail.com

Accept Invalid Incidents

Overwrite Existing Incidents

***File 1** No file chosen

File Guidelines

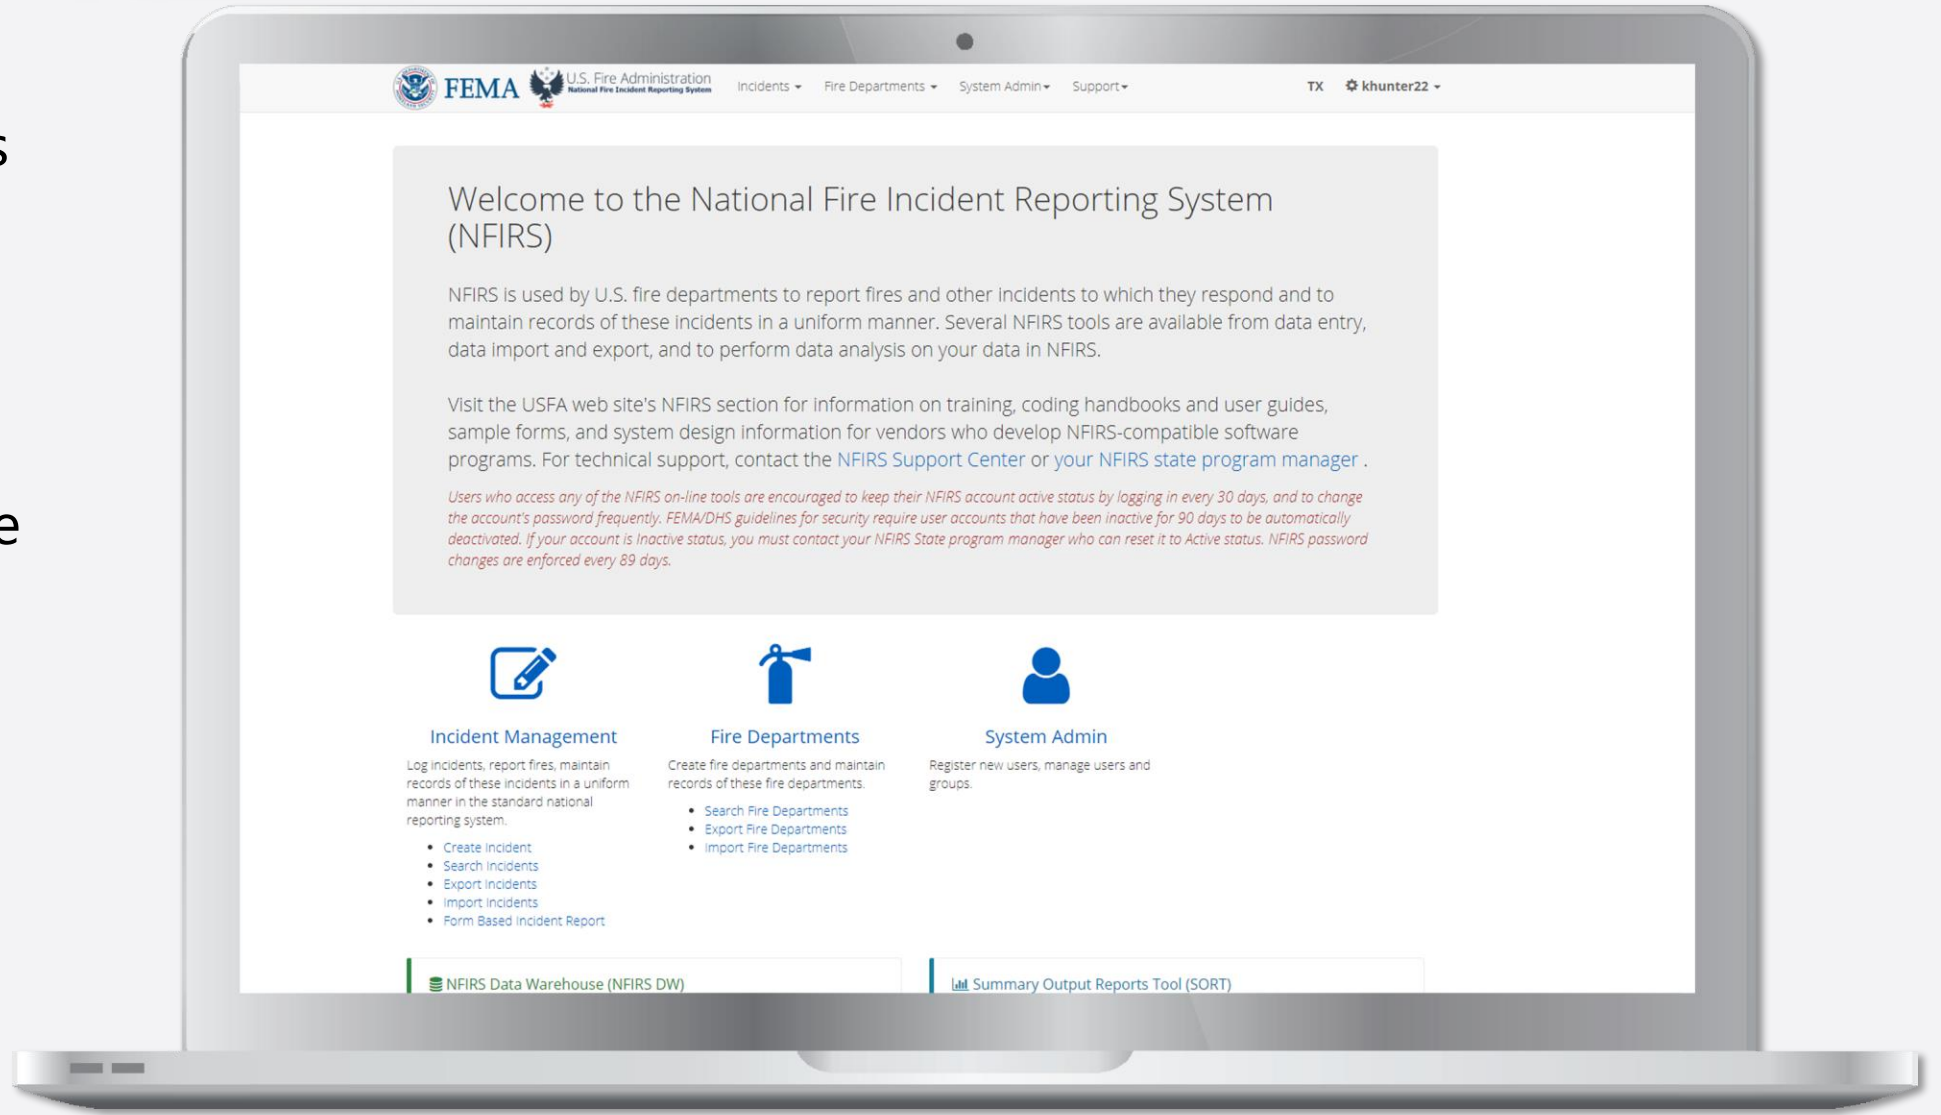

File Names

- May contain **alphanumeric** characters (a to z)
- May contain **numeric** digits (0 to 9)
- May contain **spaces** (but **NOT** tabs, newlines, or carriage returns)
- May **ONLY** contain the following **special characters**: @ (at sign), (period), _ (underscore), - (hyphen)
- No other special characters will be accepted

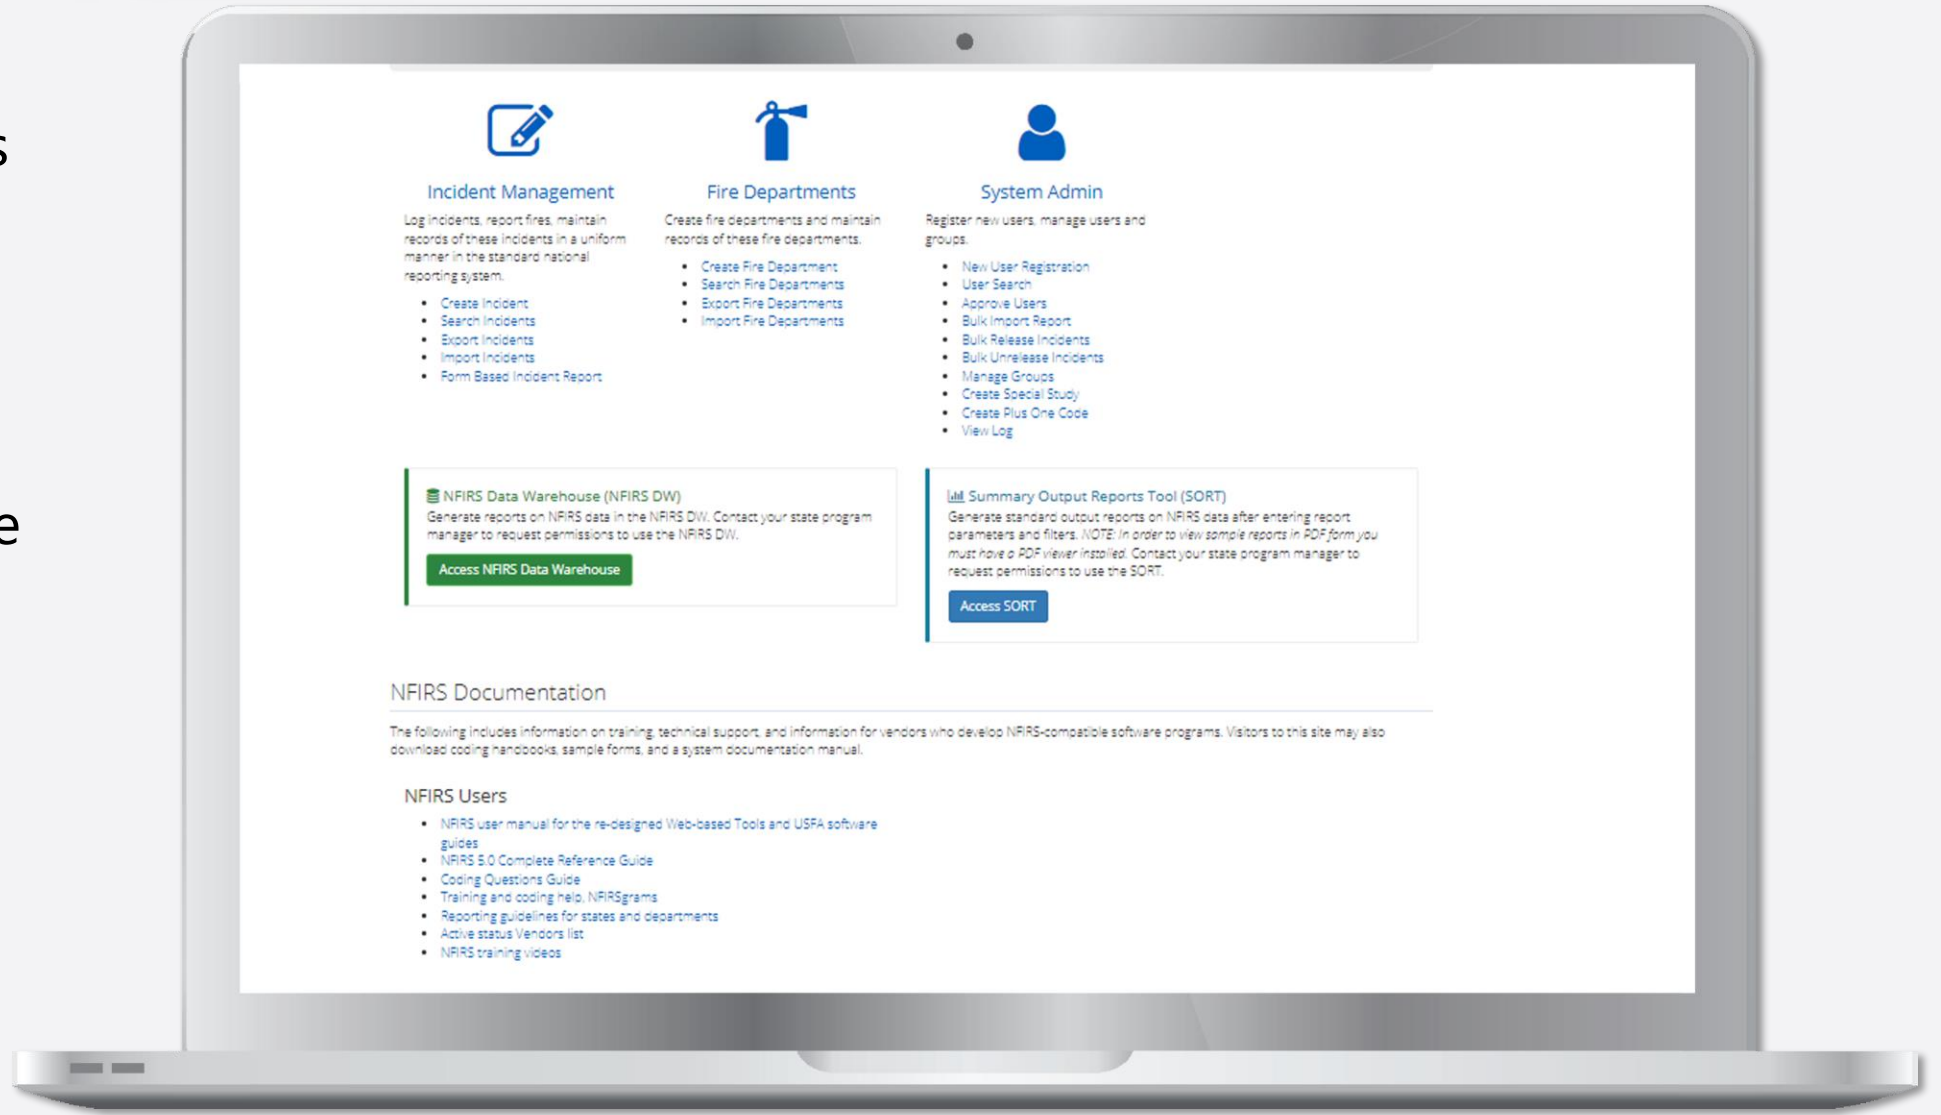

File Content Type and Number

- File content type has to be either **text/plain** or **application/zip**
- File of content type **application/zip** must only contain **plain text files**
- The file must be plain text in **ANSI** or **UTF-8** format
- File of content type **application/zip** can contain **up to 10 files**
- A **maximum of 30 plain text files** are allowed
- File content type has to be either **incident data** or **fire dept info data**
- A zip file cannot contain both incident data files and fire dept info data files
- Fire Dept information files must be uploaded separately, on the Fire Dept Info upload page

TDI | Summary output reports tool (SORT)

In order to view sample reports in PDF form you must first have a PDF viewer installed. Such a viewer is available from [Adobe](#)

Available Reports			
Report Name	Report Description	Report Category	Sample Report
Civilian Casualties	The Civilian Casualties report summarizes the user's choice of either injuries or fatalities involving civilians. The report breaks down the numbers into five graphs: by property use, by incident type, total injuries, fire incidents, and non-fire incidents. The last three graphs are grouped using a user-chosen time period including the day of the week, day of the month, the hour of the day, month of the year, quarter of the year, week of the month, or week of the year.	Casualty Reports	
Data Inventory By FDID	The Data Inventory by FDID report summarizes incident data within a given alarm date range by presenting a table for each selected fire department that provides counts of various incident modules broken down by incident validity, original incident data version, and incident publication state.	Fire Reports	
Data Quality	The Data Quality report quantifies the quality of reported incidents as a total number and percentage of the presence of key fields on various modules such as the Basic Module, Fire Module, and Apparatus Module.	Management Reports	
Detailed Selected Statistics	The Detailed Selected Statistics report summarizes incidents by the presence and frequency of a particular coded field as chosen by the user (such as the Cause of Ignition field on the Fire Module). Additionally, the user may add ad hoc filters to further narrow the incidents included. The results include the frequency, frequency percentage, number of exposures, average number of EMS and suppression personnel and apparatus, average man hours, total man hours, and average response time.	Management Reports	
FDID Incident Type Summary	The FDID Incident Type Summary report summarizes counts of incidents by incident type (incident type in the 100s, 200s, 300s, etc., U [Undetermined - 4.1 conversion], or none) and total incidents for each FDID chosen by the user. A total for all FDIDs included is given at the end of the report.	Incident by FDID Reports	
Fire Department Information	The Fire Department Information report provides counts of fire service personnel, incidents, exposures, aid given, and casualties at a per-fire department level. The report additionally quantifies the number of matching fire departments that have and have not reported matching incidents within the specified period.	Incident by FDID Reports	
Fire Report by FDID	The Fire Report by FDID report creates a summary of fire activity for each FDID selected by the user. The summary is presented as one page per FDID and includes a table by four major fire incident types (structure fires, vehicle fires, outside fires and other) and a pie chart including the top five fire types for that FDID. The table includes the counts and percentages for both that FDID and the FDID within the group of FDIDs begin reported upon.	Fire Reports	
Fire Service Casualties	The Fire Service Casualties report summarizes the user's choice of either injuries or fatalities involving fire service professionals. The report breaks down the numbers into five graphs: by property use, by incident type, total injuries, fire incidents, and non-fire incidents. The last three graphs are grouped using a user-chosen time period including the day of the week, day of the month, the hour of the day, month of the year, quarter of the year, week of the month, or week of the year. Unlike the Civilian Casualties report, this report includes all types of mutual aid (including mutual aid given and automatic aid given).	Casualty Reports	
Fires Under Investigation	The Fires Under Investigation report lists fires that were under investigation at the time they were reported to the national database. The details of the report include the FDID, station ID, incident date, incident number, incident type, property use, mutual aid given or received, and property address. The selection criteria includes choosing FDID(s), a date range, a validity status (e.g. Valid), release status (e.g. Released) and data version (e.g., 5.0). The report can be sorted by FDID or Incident Date.	Investigation Reports	
Incident Counts	The Incident Counts report is a one-page summary of totals for a user-defined list of FDIDs over a user-defined time period. The totals are broken down by Validity Status (e.g. Valid), Release Status (e.g. Released), Version Number (e.g., 5.0), Exposure Type (Primary vs. Exposure), Mutual Aid Flag (summarized by Given, Received and None) and Incident Type (only by Fires, EMS and "other"). The totals are given as both numbers and percentages.	Incident Reports	
Incident Listing	The Incident Listing report lists the five key fields required for every incident: FDID, FDID state, Incident Date, Incident Number and Exposure Number for every incident in the selection criteria. The selection criteria includes such things as which FDIDs and the date range of incidents should be included (among many others). Additionally, the current Validity Status (e.g. Valid), Release Status (e.g. Released), Station Number, Mutual Aid Flag, Incident Type, Last Updated Date, and Last Updated By name are given. The report is sorted by FDID. Caution should be exercised when choosing the selection criteria for this report as the size of the output grows directly with the number of incidents chosen.	Incident Reports	
Incidents By Time Series	The Incidents By Time Series summarizes incidents by total number of incidents, fire incidents, EMS incidents, false call incidents, and other incidents. These are grouped using a user-chosen time period including the day of the week, day of the month, the hour of the day, month of the year, quarter of the year, week of the month, or week of the year. The results are displayed graphically using bar charts.	Incident Reports	
Monthly Incident Counts	The Monthly Incident Counts gives raw counts of primary incidents, exposure incidents, and aid given incidents for a chosen set of fire departments (FDIDs) broken down by month for a full calendar year. The numbers for each fire department are grouped individually and a grand total for all the fire departments chosen is given in the report summary.	Incident by FDID Reports	
Mutual Aid Given Unmatched Departments	The Mutual Aid Given, Unmatched Departments report creates a list of mutual aid given incidents where the matching mutual aid received incident cannot be found. Each line of the list includes the aiding FDID and state as well as date, incident and exposure number, the aided FDID, state and incident number. The report ends with the total number of unmatched mutual aid given incidents.	Mutual Aid Reports	
Mutual Aid Incidents	The Mutual Aid Incidents report creates a list of mutual aid incidents that match the type chosen by the user. The choices include: aid given only, aid received only, other aid only, aid none only and all aid types. The user can also choose whether to sort the results initially by FDID or Incident Date (and next by Incident Date or FDID then incident number and exposure). Other selection criteria include the FDIDs to include, the date range, data version, incident validity and release status. For each reported incident, the FDID, FDID state, incident date, incident number, exposure number, assisted/ing FDID, assisted/ing FDID state, and assisted/ing incident number. The report ends with the total number of mutual aid incidents.	Mutual Aid Reports	

TDI | Sample report by fire department ID

Fire Report By FDID

Report Period: From 01/01/2020 to 12/31/2020

FDID/FD Name	Fire Incident Type	# of Fires	% of Fires	Group Fires	% of Group
KA926	Structure Fires (110 - 123)	1,095	30.10 %	19,305	28.24 %
	Vehicle Fires (130 - 138)	968	26.61 %	11,404	16.68 %

TEXFIRS

Reporting incidents to TEXFIRS helps provide data that can be used to:

- Prioritize training.
- Identify resource needs.
- Help with planning.
- Qualify fire departments for national grants.

Notice

- The U.S. Fire Administration has issued guidance on how to code incidents involving COVID-19:
 - [Coding recommendations for COVID-19 response](#)
 - [NFIRS National COVID-19 Special Study](#)

Texas Fire Incident Reporting System (TEXFIRS)

Data submitted to TEXFIRS is uploaded to the National Fire Incident Reporting System (NFIRS), which is used to:

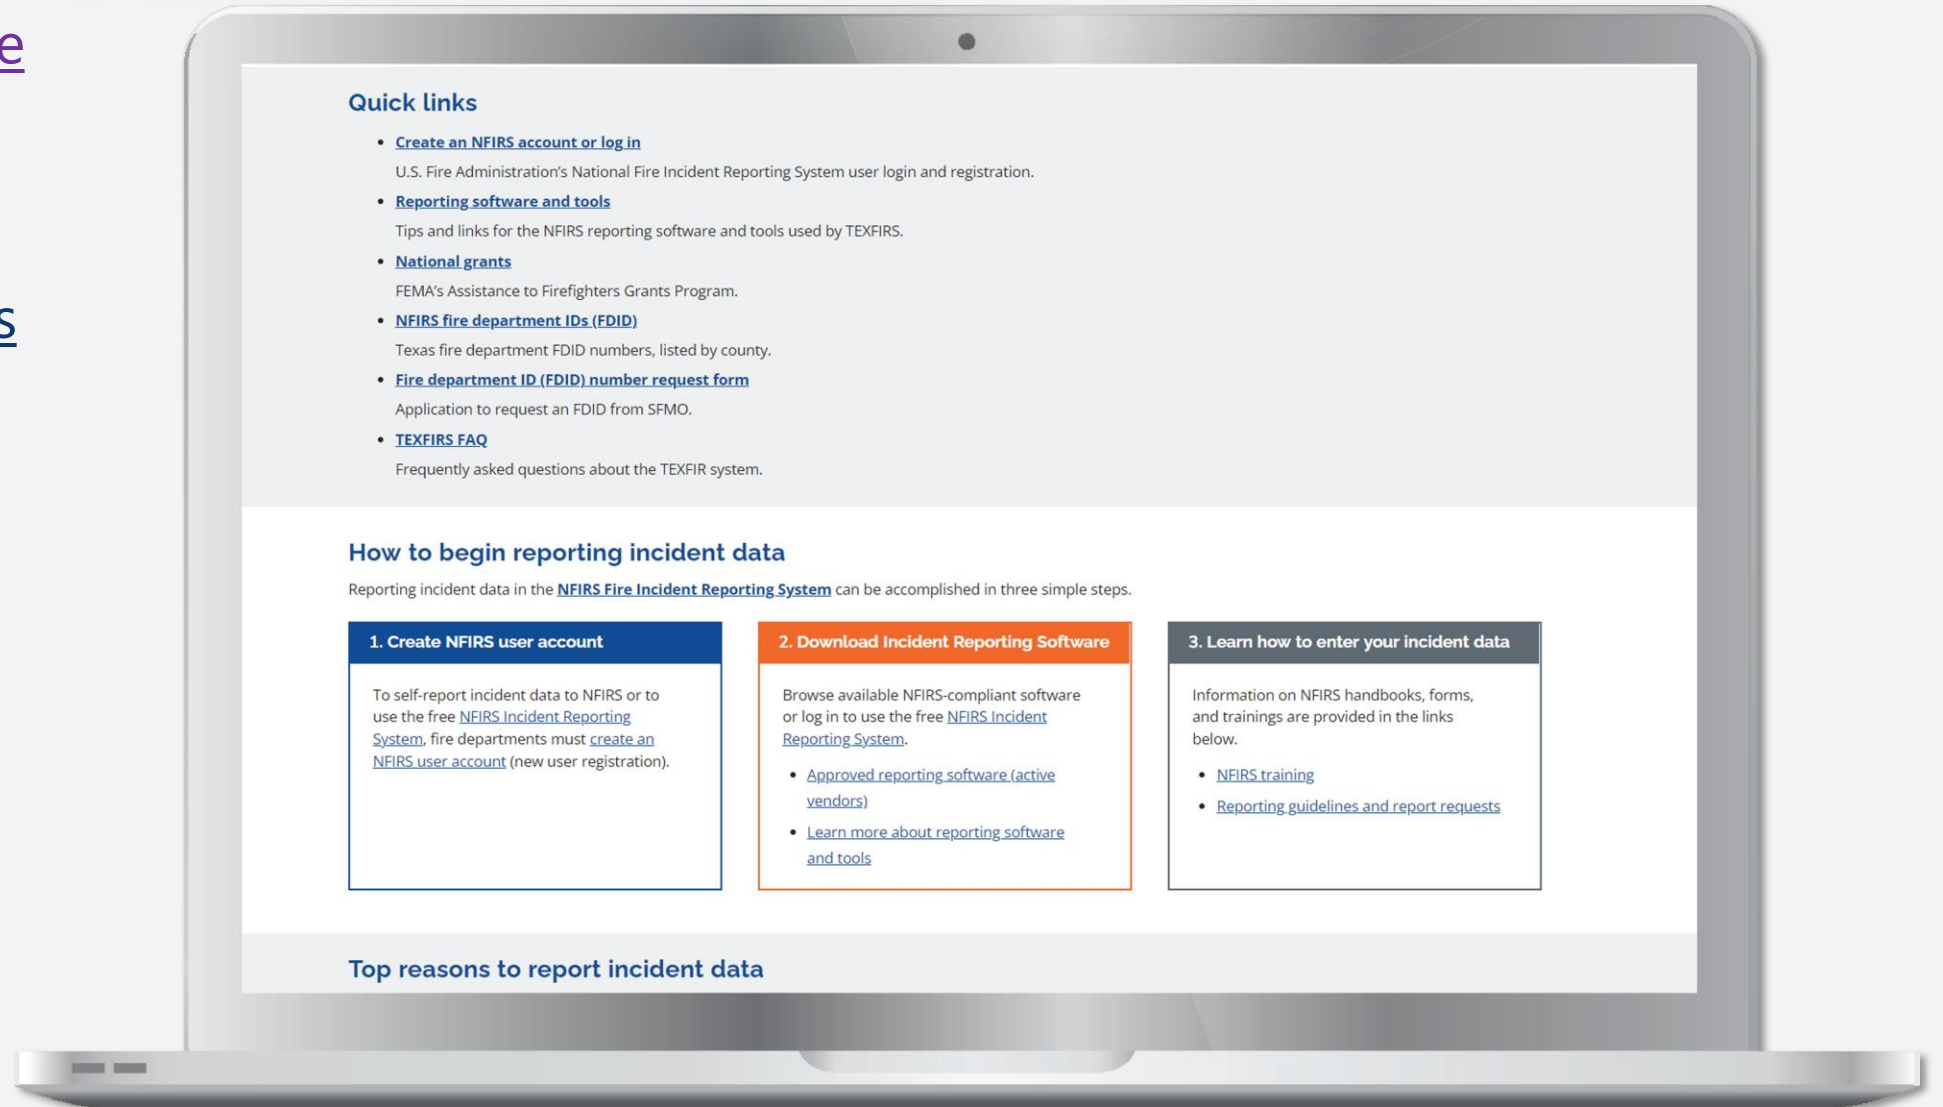

- Manage incident reporting.
- Assist with NFIRS accounts.
- Provide incident reporting trainings to fire departments across Texas.

Stay connected!
